Note:

\* Due to the irregular market quoting for some fine wool categories, figures shown relating to micron categories below 18 micron are an estimate based on the AWEX Premium & Discounts Report & other available information.

\* For any category, where there is insufficient quantity offered to enable AWEX to quote, a quote will be provided based on the best available information.

\* 10 Year data is not available for some micron catedgories, which may result in blank spaces in the table above.

Definitions:

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown in the table above, detail the period of time during the past 3 & 10 years that the market has traded either at or below its current price. The higher the percentile, the stronger the market.

#### MARKET COMMENTARY

One Australian Dollar = \$ 1.07 US, as of 30/06/2011

NORTHERN REGION - Sale Week 52/10 (31,884 bales offered nationally)

<u>On Wednesday</u> - The market retreated 20-30 cents for 19 to 23 microns, with the exception of 21 micron which lost closer to 50 cents. The the few FNF lots in the finer microns remained unchanged on a nominal basis. Skirtings held their ground with the lower Vm lots edging even higher, while the cot & colour types continued to attract significant discounts. After easing in early trade, locks steadied to close unchanged while crutchings & stains also maintained their previous levels. The crossbred offering consisted of a better selection than in previous weeks and good support had 28 to 30 microns ending the day 5 cents higher.

<u>On Thursday</u> - On the back of an improved selection, the finer microns gained support for the better style and strength lots, while the lower style & strength types closed lower (in line with the rest of the market). The medium to broader microns all lost 30-50 cents as buyers retreated, with higher Vm lots most affected (in particular those containing shive). Low Vm skirtings were well supported (with the better style lots most affected), however the higher Vm lots continued to be irregular and generally up to 20 cents easier. Locks remained unchanged for 20 micron and broader, while 19 microns retreated 15-20 cents. Crutchings were 20 cheaper while stains remained firm. The Crossbred offering consisted of lots containing burr & clumpy burr, leaving this section of the market generally unchanged on a nominal basis.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
