MARKET COMMENTARY

It was a strong finish to the 2015/16 wool selling season with the Northern Region Indicator achieving the second highest season-closing level on record. Gaining 14 cents over the two day sale the NRI closed at 1317, which was also 10 cents off the season high and 27 cents above last season's closing quote.

Although all 3 centres were in operation it was another small sale of 28,866 bales making it the smallest 3-centre sale since August. It was a similar pattern to last week with the overall market spurred on by strong support in the medium/broader micron ranges. 19.5 to 23-microns rose in equal increments, climbing around 20 cents clean for the week. Although the finer microns also closed ahead, their results lagged their broader counterparts, firming by a more modest 5 to 10 cents clean. As with recent weeks the stylish 40nkt types continued to find good support in the superfine range. The increase in Merino Fleece prices came despite global uncertainty surrounding the British referendum result to leave the European Union ('Brexit').

Merino Skirtings maintained good competition and firmed slightly. Merino Cardings also held firm for the week. Crossbreds had mixed results; recent support for the finer microns (25/26) persisted this week while the broader microns lost ground. Two more auctions remain before the annual three week recess; next week is estimated at 38,265 bales.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1293 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1232 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
