AU BALES OFFERED		24,489	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																			
AU BALES SOLD		30,848	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

## MARKET COMMENTARY Source: AWEX

The market suffered falls this week, with losses felt across all sectors of the market. There was a noticeable softening of buyer sentiment in the merino fleece market, which transferred into softer demand, resulting in price achieved being well below those of the previous series.

Across the country the individual MPGs lowered by 2-64 cents, these losses combined with falls in all other sectors contributed to a 30-cent (2.1%) reduction in the NRI, leaving it close at 1424. Understandably, the lower prices were met with plenty of seller resistance, which pushed the passed-in rate to 22.5% (13.1% higher than the previous week).

The crossbred sector recorded the largest falls (in percentage terms) for the series. In the South 26 micron fell 57 cents (-7.2%), 28 micron lost 25 cents (-5.6%), while 32 micron dropped 20 cents (-7.9%).

Although the market recorded losses, there were positive signs toward the end of the series, so much so that on the second day in the West (selling last) the local MPGs recorded positive movements of between 1 and 54 cents.

Next week's offering is expected to increase to 42,119 bales.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1780 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1569 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
