MARKET COMMENTARY Source: AWEX

This week's sale opened on a cautious note with most wools selling at discounted levels, the only notable exception were low mid break lots, which were attracting strong demand under limited volume. Buyer confidence slowly returned as the sale progressed and wools which were previously being overlooked started to attract stronger competition, although lots with a CVH greater than 55, continued to lose ground as buyers struggled to average them into their purchases.

The skirting market experienced an up and down week, prices generally fell by 20 to 40 cents on the first selling day, only to recover the losses on the second day, to finish the sale generally unchanged.

The crossbred sector performed with mixed results. The finer and broader edges managed to record small gains of 5 to 10 cents, the bulk of the offering however, was in the 26 to 30 micron range and these types slipped another 10 to 20 cents.

The oddment sector lacked buyer confidence after the large losses of the previous few weeks. All types and descriptions were further discounted as the market struggled to find a level. Prices generally fell by 30 to 50 cents, sending the carding indicators down by an average of over 40 cents. The last three weeks has seen the carding indicators drop by over 280 cents.

There are currently 40,686 bales on offer next week in Sydney, Melbourne and Fremantle.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1603 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1346 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
