## MARKET COMMENTARY

Week 10 saw Fremantle re-join Sydney and Melbourne on the selling program, pushing the national offering to 40,553 bales. The majority of the wool catalogued was freshly shorn and had not been offered previously, a reflection of the recent buoyant market.

The fleece market opened on the east coast to a stronger tone from the very first lot and continued to strengthen in all centres as the week progressed. All types and microns generally enjoyed gains of 10 to 20 cents on the back of a continual improvement in sentiment (Fremantle posted rises of 20 to 25 cents but that was compared to their previous sale held a fortnight earlier). The superfine range came under close scrutiny, particularly with Sydney hosting a designated superfine sale. 16 to 18 microns were well represented by Best style types and to a lesser extent average Spinner styles. A significant portion of this range tested greater than 40nkt, and was met with strong competition, posting gains over the two days with premiums of up to 200 cents emerging for selected lots.

Although the focus was squarely on these better types, the strength also carried through into Good style and part-tender types. The skirting market continued to perform very well on the back of the strong fleece market. Buyers were showing the most interest for well-grown low vm types (<3.0% vm) which have emerged in greater numbers as a result of a favorable early growing season.

Crossbreds had mixed results, weakness in the 30/32 micron range was overshadowed by good support for 25 to 28 microns. The oddment market, although solid, did not match the rises of the fleece and skirtings and closed at similar levels to last sale.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1356 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1245 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
