MARKET COMMENTARY

Prices have continued to climb at the second largest offering for the season. The jump in prices for Superfine types pushed the AWEX-NRI 23 cents higher to close at 1441, the highest it has been since June 2011.

Buyer attention persisted in the Superfine microns with 16.5 and 17 microns closed the week as much as 60 cents higher whilst 17 and 18 microns were 40 to 50 cents higher. The rises shrunk towards the medium/broader microns, culminating in a small loss for 22-microns. Most activity was in the early part of the week with Thursday finishing on a flat note when lots outside of specification tended to lose ground while the better lots generally stayed firm until the end. The outperformance of the superfine types compared to the other microns has pushed out the fine-to-medium differential to multi-year highs. The 18 to 21 micron differential is now more than 300 cents, well above the 10-year average of 250 cents. The skirting market performed in a similar manner to the fleece, 18.5 micron and finer enjoying gains of over 40 cents, while 19 micron and coarser only rose by 10 to 20 cents. Crossbreds bucked their recent trend and recorded price rises of between 5 and 10 cents, the exception was 26 micron which lost a further 5 cents. Despite Melbourne and Fremantle's Carding Indicator falling on the second day of selling all three centres have posted carding increases for the week, with again finer wools being the focus.

Next week sees the second last sale before the 3 week Christmas recess and quantities have increased to over 55,000 bales with selling in Melbourne, Sydney and Fremantle.

AWTA Key Test data was released today, showing an increase in testing volumes of 21.5% for the month of November. These figures support the view that any delays in shearing or getting wool off farm, due to the wet spring, have now been caught-up. Nationally we have tested 1.6% more bales YTD, compared to the same period last season and have sold 8% more.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1401 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1262 for 60% of the time, over the past ten years.

The above '**Rise or Fall**' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The '**Monthly Price Movement**' graph shows the extent of movement for each month, for the past 5 years.

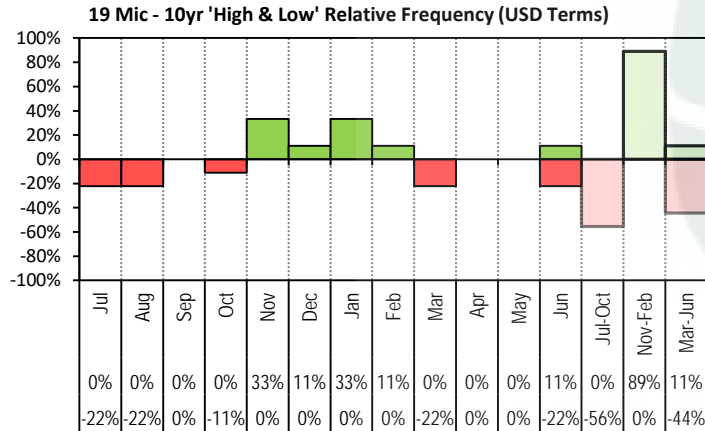

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

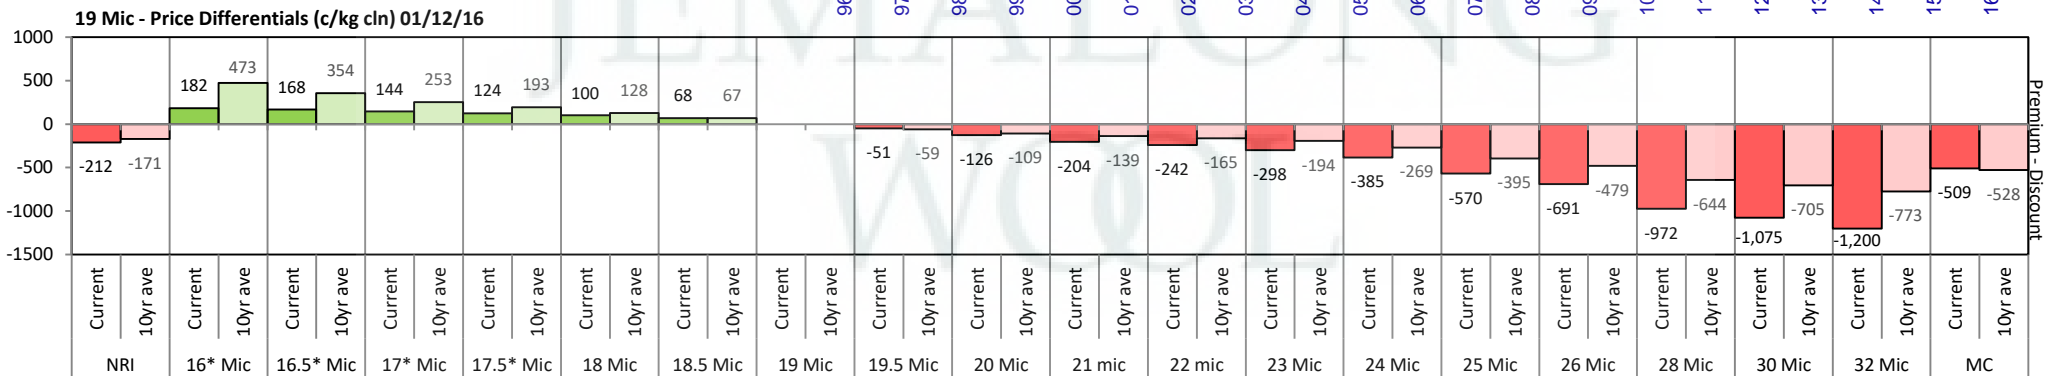

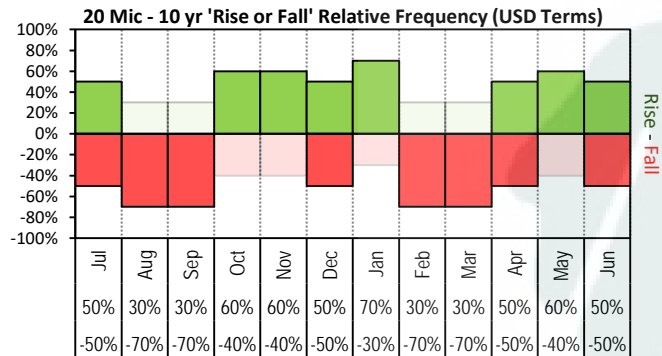

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

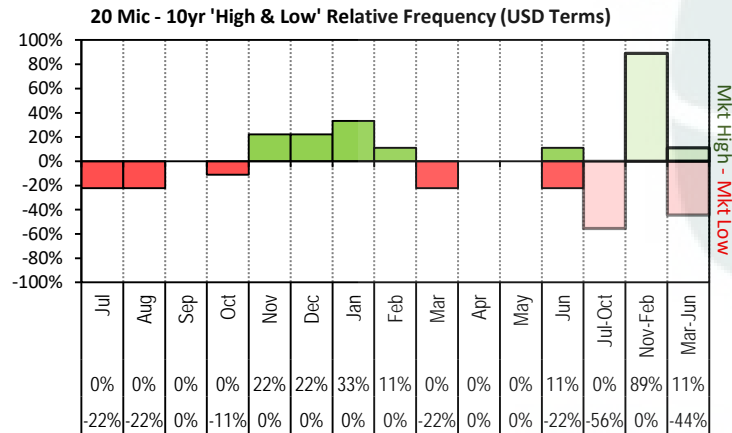

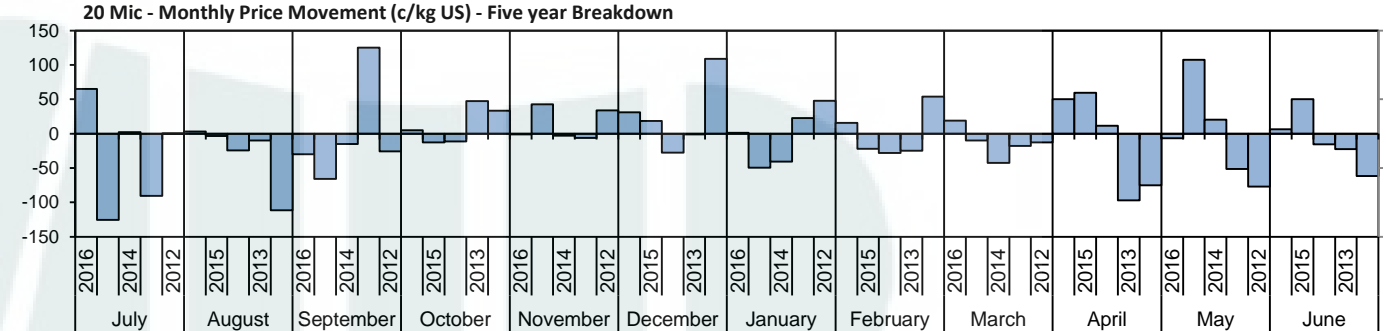

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

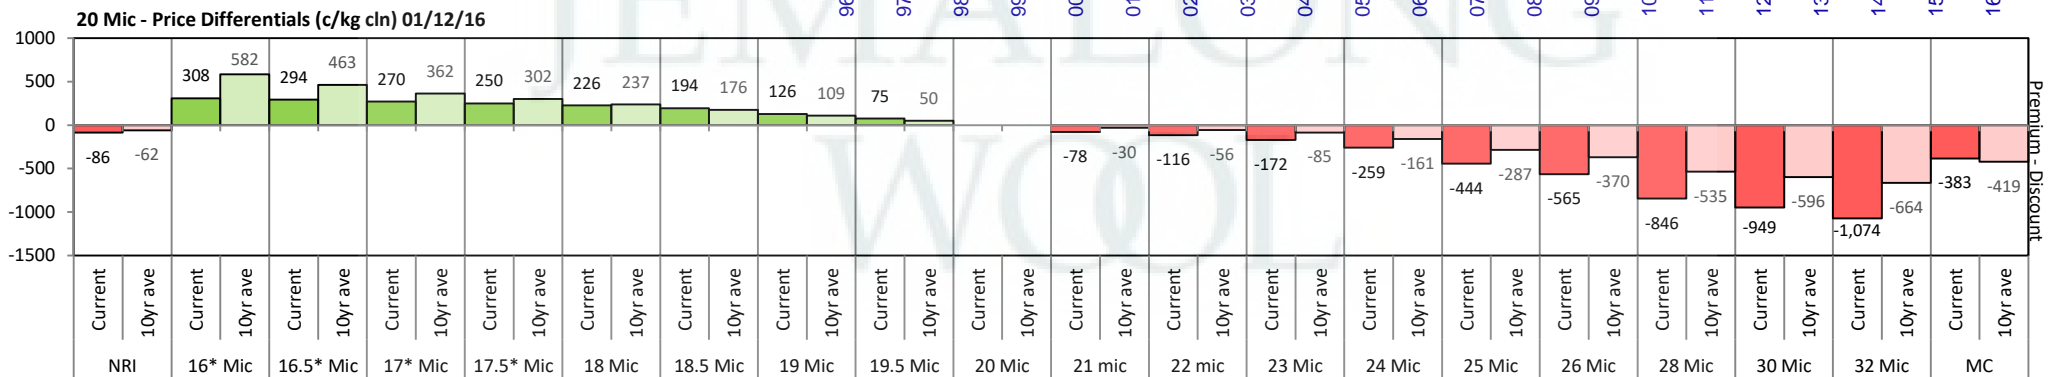

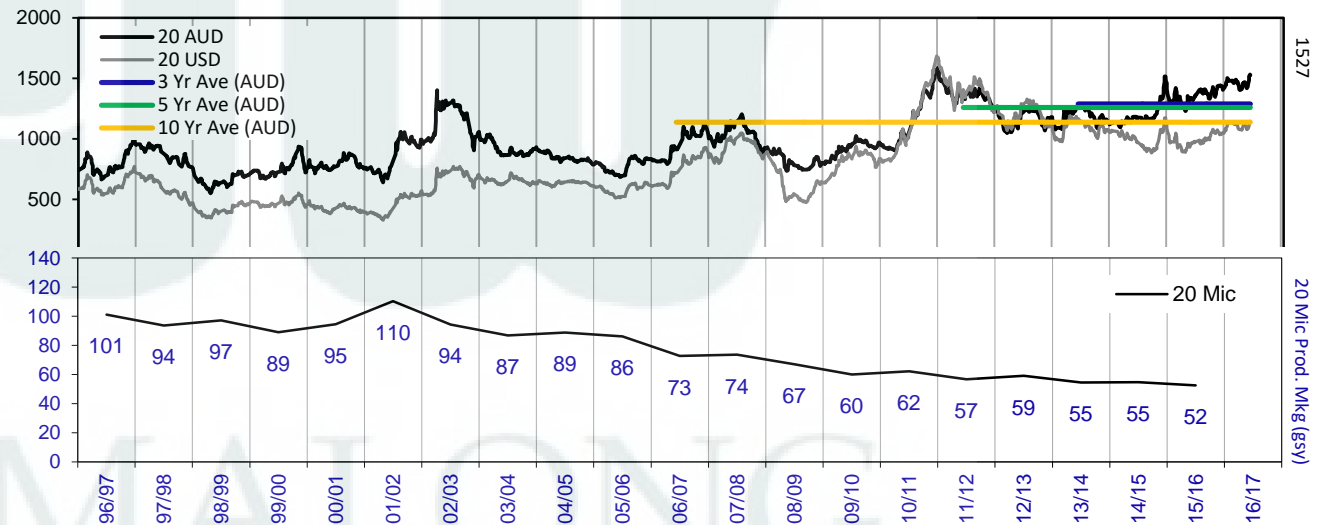

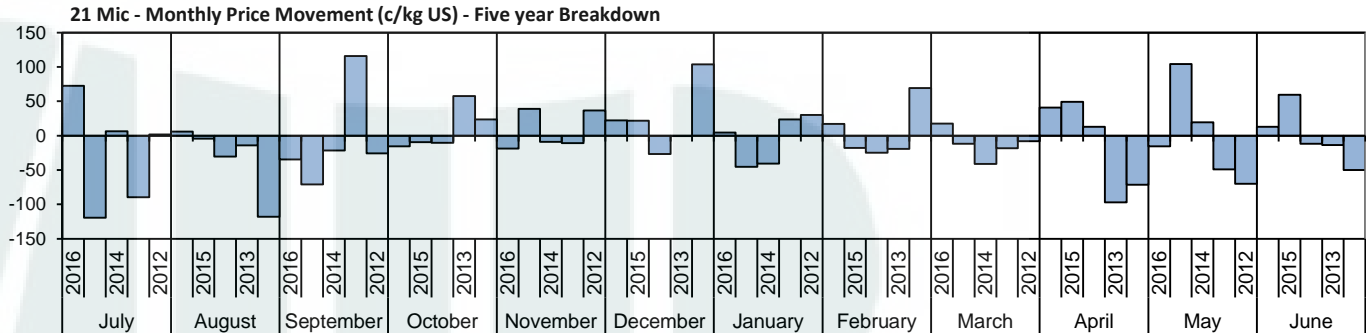

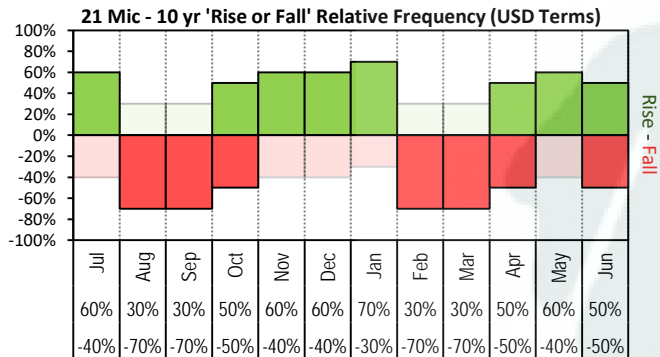

The above '**Rise or Fall**' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The '**Monthly Price Movement**' graph shows the extent of movement for each month, for the past 5 years.

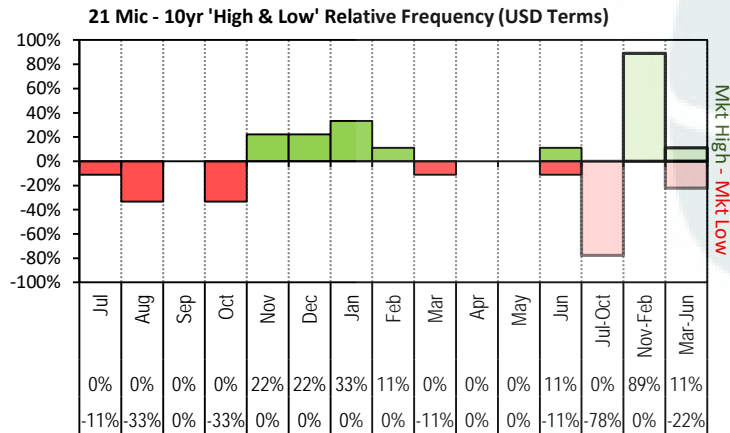

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

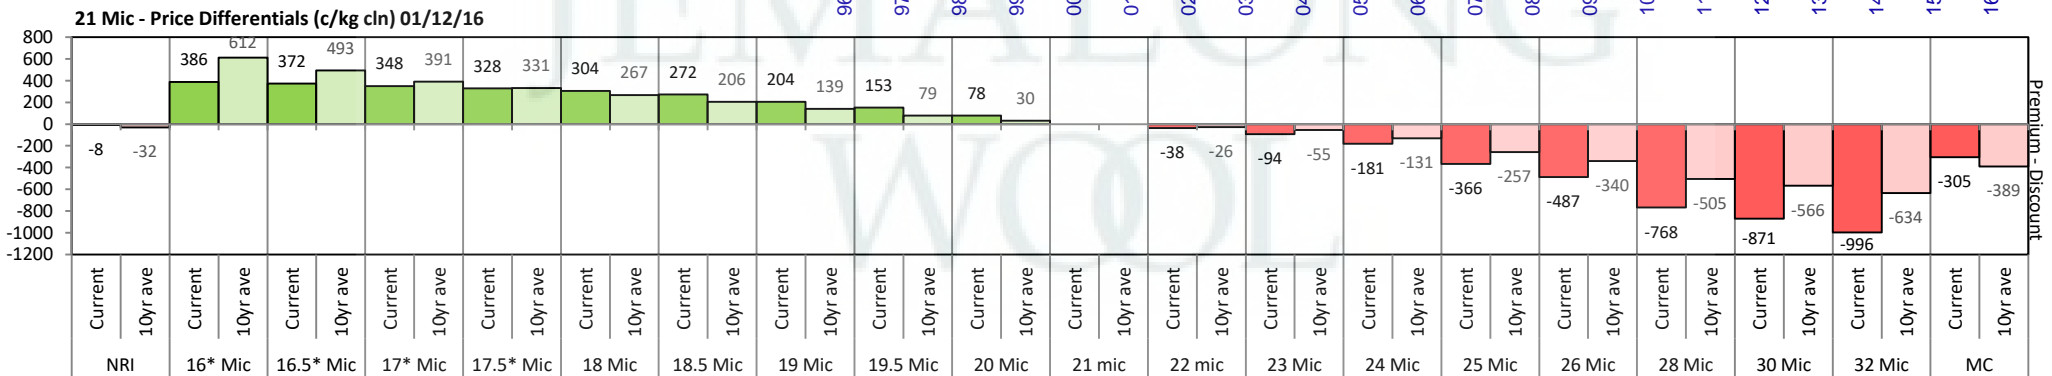

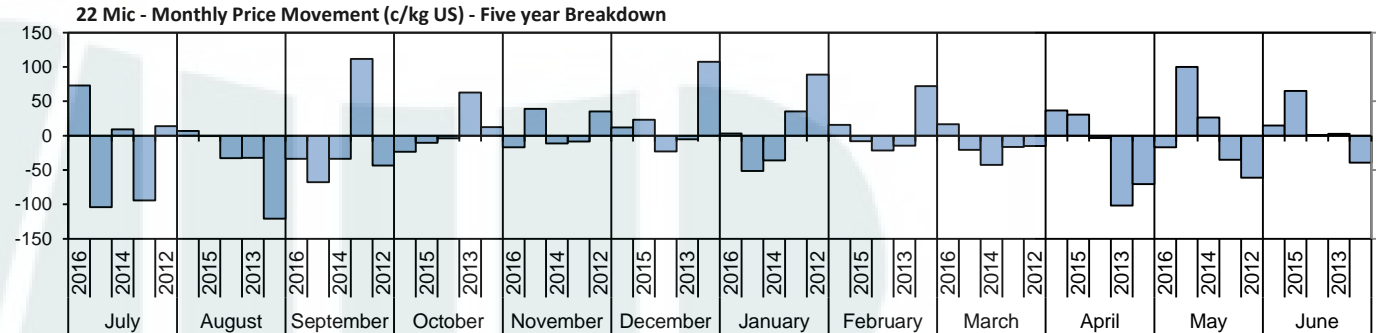

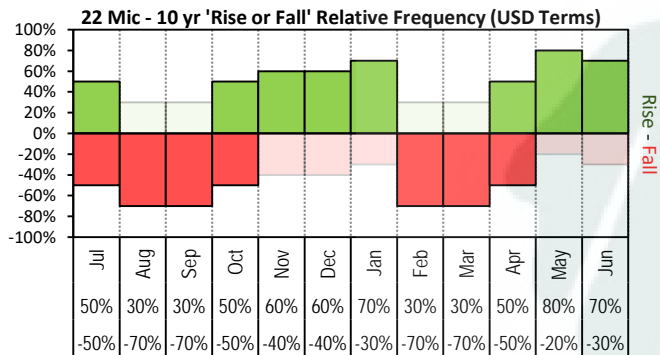

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

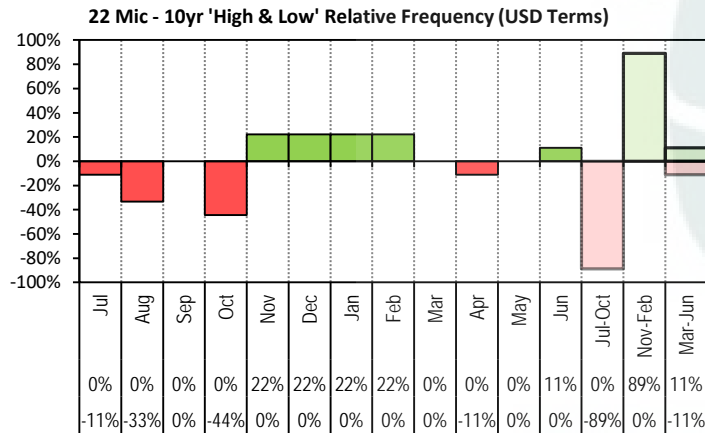

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

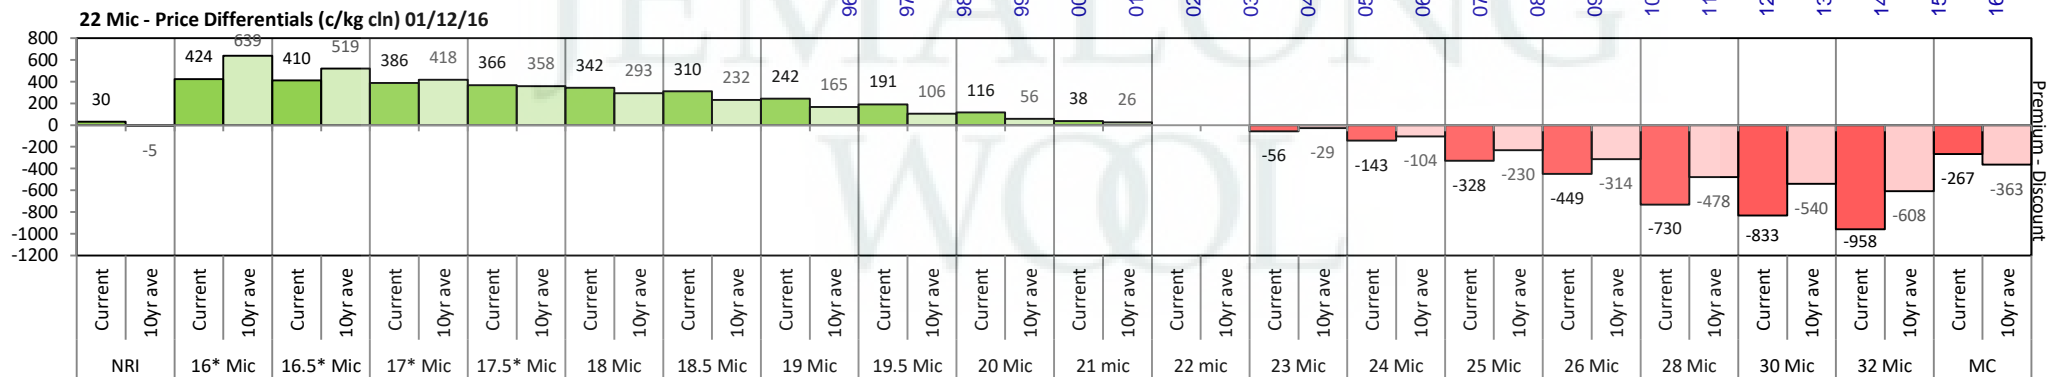

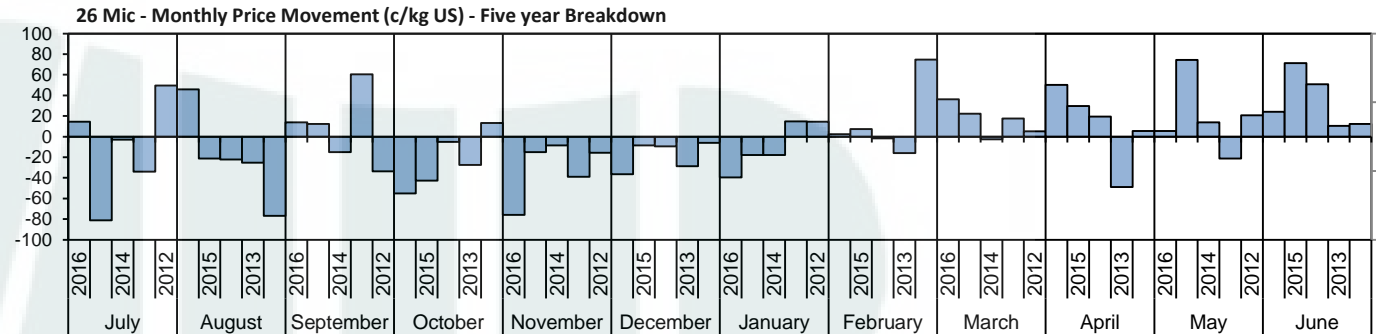

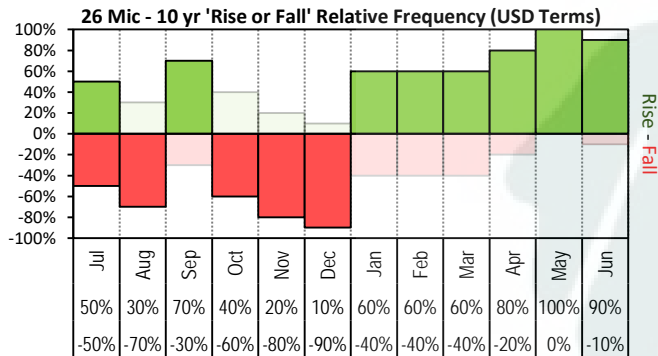

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

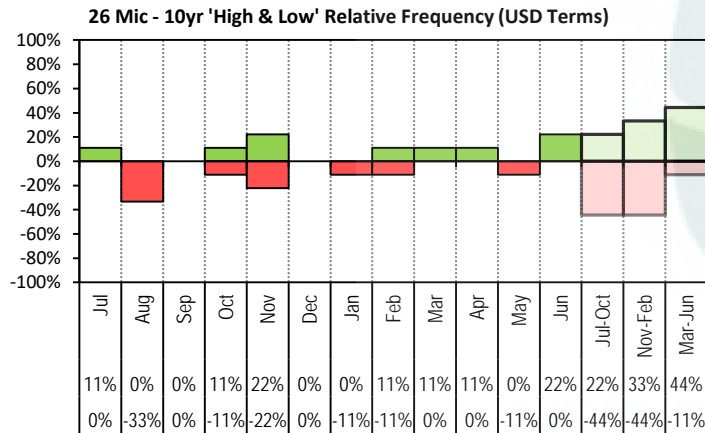

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

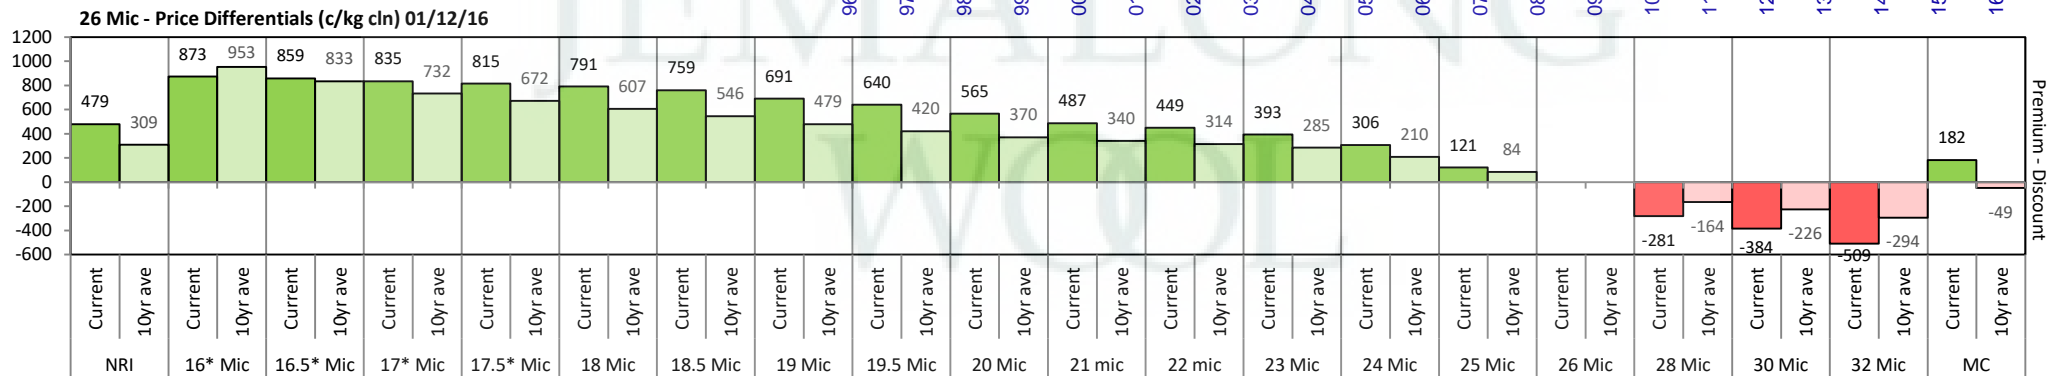

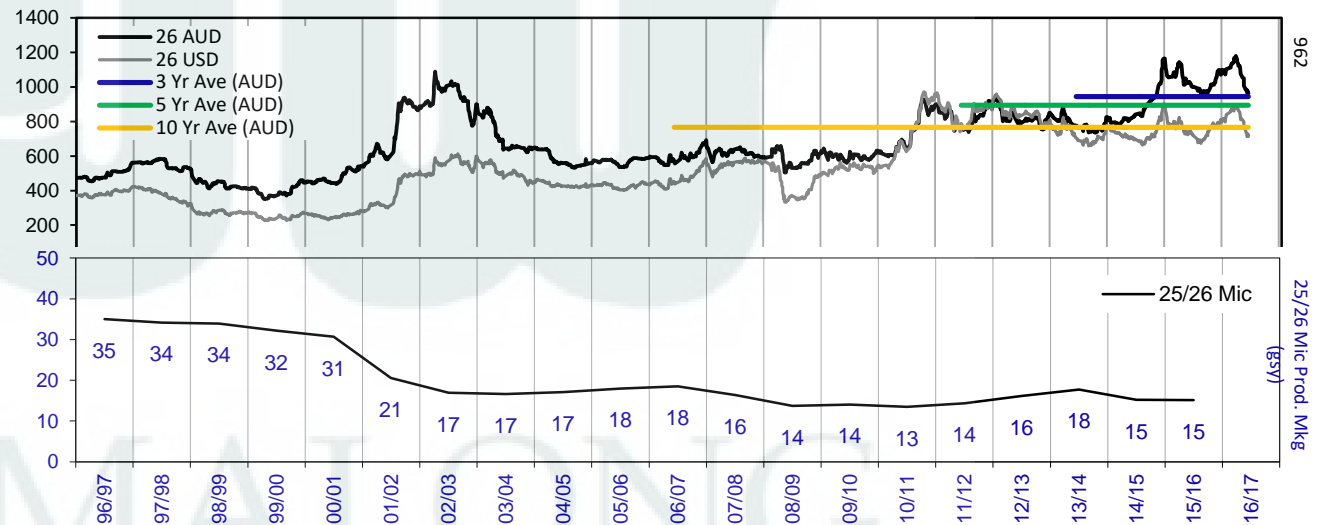

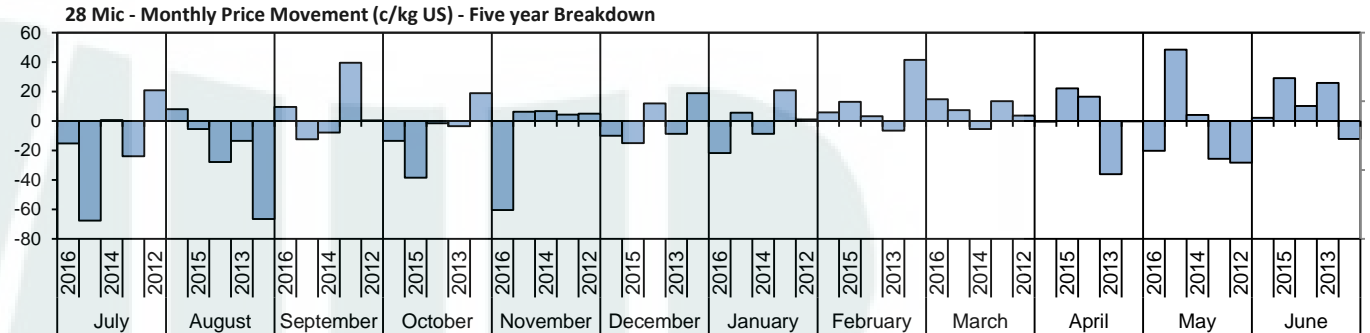

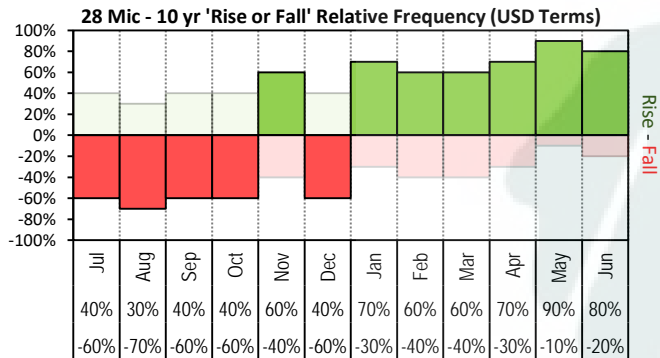

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

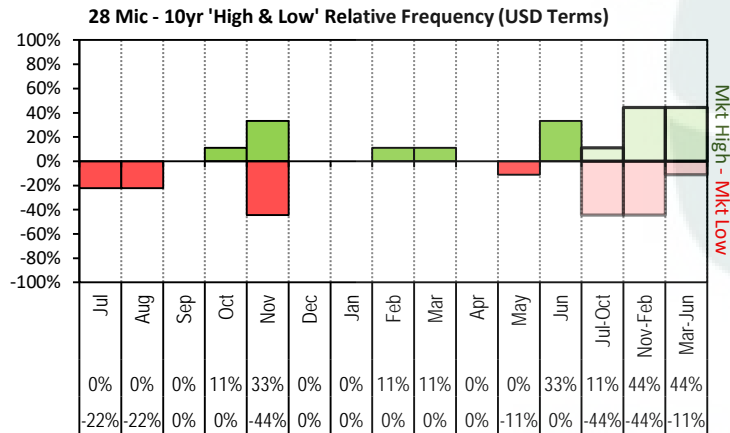

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

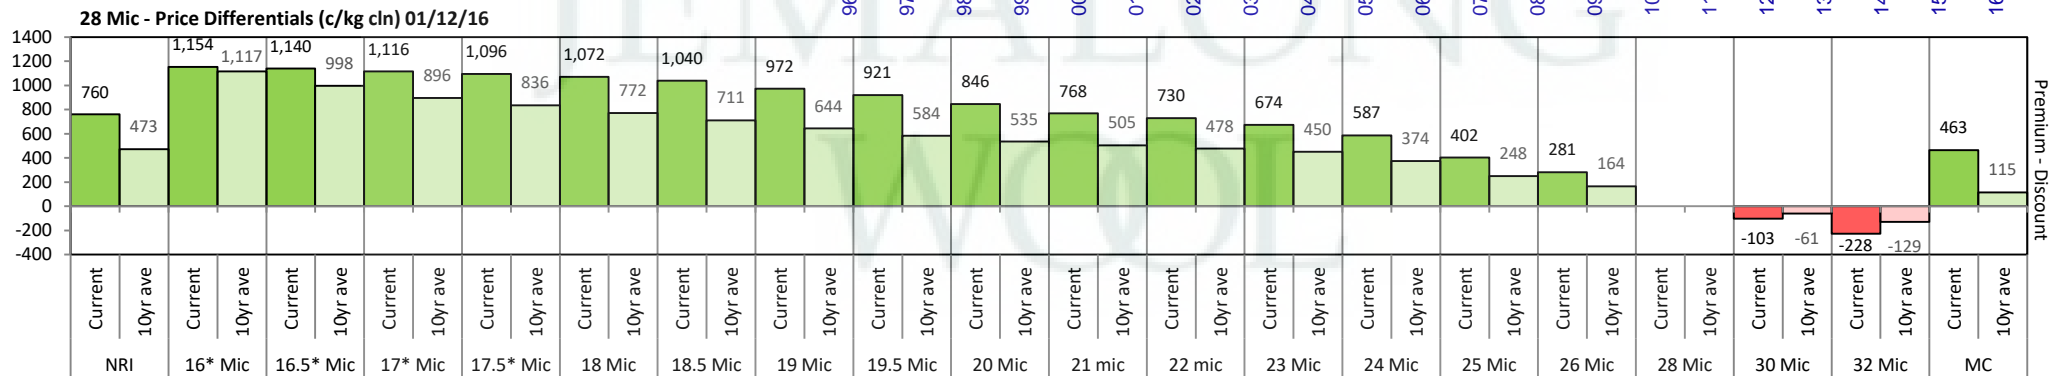

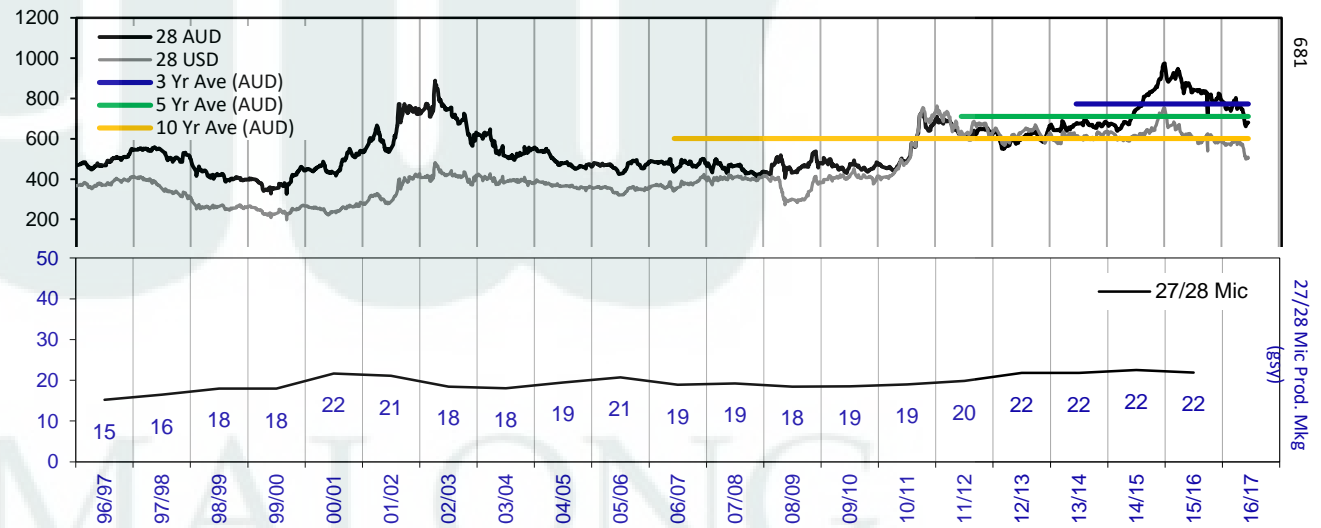

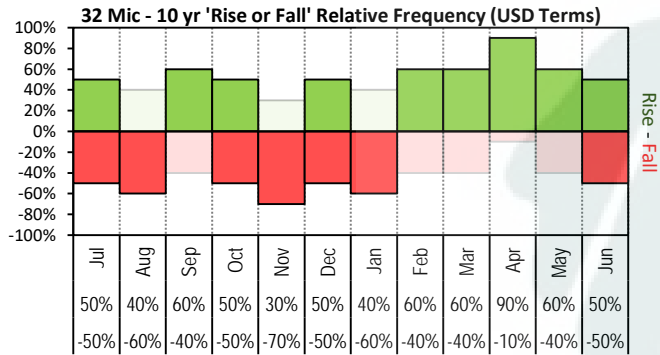

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
