AU BALES OFFERED		32,899	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																		
AU BALES SOLD		29,630																			
AU PASSED-IN%		9.9%	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.																		
AUD/USD		0.6574 -0.1%

MARKET COMMENTARY Source: AWEX

Only 32,899 bales were offered this week, and despite the reduced quantity the market was generally unable to maintain the previous week's levels.

From the opening, prices were noticeably below those on offer at the close of the previous week's auction. By the close of day one the individual MPGs for merino fleece had fallen up to 63 cents, only the 20-micron in the West posted an increase (+1 cent).

Day two saw the market settle, with many pockets recording increases. The MPG movements for 17 microns and broader ranged between +20 and -8 cents. Strong demand for wool 20 microns and broader pushed those MPGs higher.

The skirting market tracked the fleece, with general losses of 20-30 cents recorded. The broader crossbred wools (>28 micron) performed solidly with their MPGs ranging from unchanged to +5 cents. The oddments were the other highlight, the only sector to record an overall positive result. Strong demand helped to push the three Merino Carding (MC) indicators up by an average of 8 cents.

Currently, 44,268 bales are rostered for sale next week (11,369 more than this week).

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1660 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1469 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
