AU BALES OFFERED		38,590	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. * Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWEX

The market has continued its steady rise, recording an overall increase for the third consecutive week. Strong widespread competition for merino fleece types helped the market higher, the prices being achieved continued to improve as the sale progressed, so much so that all the indicators in the Western region (which sold last) closed at or above those in the East. By the end of the series the individual MPGs across the country added between 6 and 63 cents, the only exception was 20 micron and broader in the North which posted small losses.

The NRI added 28 cents, to close at 1430. This was the highest point of the NRI since March 2020. The merino skirting types also attracted excellent buyer support and followed a similar path to the fleece. Prices generally rose by 40-80 cents, lower vegetable matter wools and those finer than 18 micron were most affected.

There was little movement in the Crossbred sector, with main buyer interest focussed on the better prepared lines. The merino carding indicators recorded increases in all three centres for the first time since April, solid demand for oddment types pushed the MCs up by an average of 11 cents.

Fremantle are not selling next week, as a result the national offering reduces to 38,674 bales.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1848 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1536 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
