AU BALES OFFERED		34,872	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. * Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWI

Prices were generally weaker throughout the selling week, with the most significant movements in the carding & oddment sector with losses of up to 50 cents for these types. Most other main-stream types were initially 15-20 cents lower, recovering slightly on the final day. Subsequently, by the close of selling, the general quotations for Merino fleece, skirtings, and crossbreds were around 10ac lower for the series.

Purchasing was again dominated by orders direct from the top makers or their indent suppliers and other first stage manufacturers. Traders continue to report that they are struggling to obtain new business of any consequence from China. However, with the lockdowns being lifted across China, many expect a renewed interest once transport systems get flowing properly again. Indian and European buying remains evident in the salerooms; however, purchase rates are somewhat more selective as a large portion of the offering is not meeting the quality and specifications required.

The EMI finished the week lower at 1414; however, in USD terms, it rose to 1014. The national clearance rate improved just slightly to 86.9%, which was once again greatly influenced by the high passed-in rates in the crossbred sector.

Next week has only the two Eastern centres operating in which 33,000 bales are currently forecast for sale.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1684 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1664 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
