AU BALES OFFERED		42,750	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																	
AU BALES SOLD		38,974																		
AU PASSED-IN%		3.3%	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWEX

After recording two positive movements and an unchanged result over the previous three selling series, the Australian wool market has fallen this week. The national offering rose by 5,354 bales to 44,378 bales, making this the largest national offering since the end of August. The total amount offered this season is tracking well above the previous one. Season to date, there have been 625,655 bales offered (24,103 more bales (4% higher) than for the corresponding period last year.

There was very strong buyer interest on wool possessing favourable additional measurement (AM) results, and wool in this category recorded very little change. Lesser style wool (those with less favourable AM results and/or noticeable VM) were discounted, lowering the overall market.

The losses were most felt in the merino fleece sector, with the skirtings, cardings and crossbreds recording minimal movement for the series. The EMI lost 10 cents for the week, and continues to trade well below last year (compared to the corresponding sale last season, the EMI is 132 cents lower (-10.5%).

Next week sales will be held on Wednesday and Thursday to accommodate a Public Holiday in Melbourne on Tuesday. 45,246 bales are currently expected to be offered in Melbourne, Fremantle and Sydney (which is a designated Superfine sale).

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1660 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1464 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
