AU BALES OFFERED			* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																	
AU BALES SOLD			* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWEX

This week, the market recorded solid price rises, with every sector enjoying gains. 40,491 bales were available to the trade; this relatively large offering received excellent support from a large cross-section of exporters, resulting in spirited bidding from the opening lot. This strong buyer sentiment helped push prices continually higher as the series progressed. The merino fleece types again led the way with solid rises across the entire micron spectrum. These gains were reflected in the MPGs across the country, which rose by 15-98 cents, the finer microns recording the most significant increases. These rises helped push the EMI up by 42 cents, to close at 1449 (the largest weekly rise since October last year).

The EMI has risen for five consecutive weeks, adding a total of 91 cents over this period. Compared to the same time last year, the EMI is currently 164 cents higher than the corresponding sale of the 2020/21 season, an increase of 12.8%. In addition, General rises in oddment types of between 25 and 40 cents combined to push the three Merino Carding Indicators up by an average of 34 cents.

After two weeks of unusual sale days, next week's roster returns to the normal Tuesday/Wednesday format. The national offering increases considerably, with 48,274 bales currently expected to be offered nationally.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1705 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1622 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
