AU BALES OFFERED		38,429	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																				
AU BALES SOLD		36,473	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

## MARKET COMMENTARY Source: AWI

The wool market was generally dearer this week, with some renewed demand from China, as well as interest from both the subcontinent and Europe, which helped stimulate the auction upwards.

Fremantle enjoyed the largest gains, with all Merino types trading at levels 25-35ac dearer for the week. Eastern markets were very firm to 10ac dearer within most sectors. Initially, forward-selling exporters were keen to purchase some volume without spooking the market but this strategy had to be swiftly re-evaluated, as strong competition resulted in some larger-than-quoted gains, particularly on higher-yielding lots with good strength (these lot types are getting scarcer as growing conditions worsen in the Southern half of Australia). A percentage of these lots are required for most contracts to average specifications correctly for shipment.

Australia's largest traders dominated the buyers' lists this week, pushing aside somewhat the direct buying orders from top makers. All buying sectors were active but in many instances, the intent and actions of the larger trading companies was just too strong.

Next week sees auctions selling to the usual Tuesday and Wednesday rotation and volume falls to 35,700 bales.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1528 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1685 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
