AU BALES OFFERED	36,966		* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																	
AU BALES SOLD	35,743		* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWEX

This week's wool market bounced back from last week's losses, recording an overall increase across both selling days. There were 38,736 bales available to the trade, 4,846 bales fewer than in the previous sale (which was the largest sale of the previous twelve months). The 96.7% clearance rate, once again, highlights that most sellers are prepared to meet current market levels.

On the opening day of selling, the market recorded healthy rises in the merino fleece sector. The MPGs for 19.5 micron and finer were generally 20-30 cents dearer. Movements in the skirtings were generally in line with the fleece. The carding market also gained a bit of ground, while the crossbreds recorded very little change. The result was a 10-cent rise in the EMI, which finished the day at 1,675 cents.

On the second day of selling, only Sydney and Melbourne were in operation, meaning there was a smaller volume of wool available to the trade. The market generally maintained the levels on offer of the previous day, although there were a few selected MPGs across the centres that lost ground. The EMI added 2 cents for the day, finishing the week 12 cents higher, at 1,677. The oddments have now risen for every week of the current calendar year.

Next week's offering is of a similar size, with a current estimate of 37,971 bales.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1502 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1713 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
