AU BALES OFFERED		38,725	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. * Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

**MARKET COMMENTARY** Source: AWEX

The national offering increased to 39,261 bales this week. The market continued to track downward with superfine types the hardest hit. The finer the wool the greater the losses, 16.5 micron and finer were 90-100 cents easier, 17 to 18 micron were generally 40-80 cents cheaper. Strong demand for 19.5 to 21.5 micron, resulted in these types recording gains of 5-15 cents for the week.

The NRI lost 24 cents for the series, to close at 2050. Despite the overall losses for the week, there were positive signs apparent later in the series, with the Northern and Southern indicators basically unchanged on the final selling day, while Fremantle (which closes the selling week) recorded overall positive movement on the last day, pushing the Western indicator up a healthy 17 cents. The skirting sector had a week of mixed results. Wool carrying less than 2% vm attracted spirited bidding, resulting in gains for the week of 20-30 cents. As the amount of vm increased, buyer demand decreased, causing prices to generally fall by 20-40 cents (lots with more than 8% vm being most affected). The oddments continued to record further losses, prices generally fell by 35-50 cents.

Quantities reduce next week, currently there are 34,467 bales rostered nationally.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1890 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1411 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

**Table 9: Returns pr head for skirted fleece wool.**

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
