MARKET COMMENTARY

A drop in the official cash rate by the Reserve Bank to 1.75% (a record low) triggered a further decline in the exchange rate this week. Trading above 77 US cents early in the week, the Aussie dollar closed out the week at 75 cents, 1.2 cents lower than the previous Thursday. Wool prices reacted with a continuance of the recent rally and another sharp jump over the two days of selling.

The opening day recorded the best result with rises of 30 to 40 cents. Melbourne was more subdued with rises of 20 cents after a strong opening which had moderated over the course of the day. This pattern repeated on Thursday but the results were more mainstream with closing quotations that were 5 to 10 cents higher than the previous day. Stylish types maintained their momentum, particularly in Melbourne where they added another 20 to 30 cents in the finer ranges. The increases for these types capped off a successful week where selected types were 50 to 60 cents higher than the previous week. Merino skirtings rose equally each day to close around 40 cents higher. Good length types with low vegetable matter continued to attract most interest, especially those displaying little cott or colour. Crossbreds had a fairly quite week, firming 5 to 10 cents for the sale. Merino Cardings made progressive increases to close the sale 10 to 20 cents dearer.

36,000 bales were offered for sale this week; a slight increase on last sale and a similar total which is expected for the following 2 weeks.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1284 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1225 for 60% of the time, over the past ten years.

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above '**Rise or Fall**' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The '**Monthly Price Movement**' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

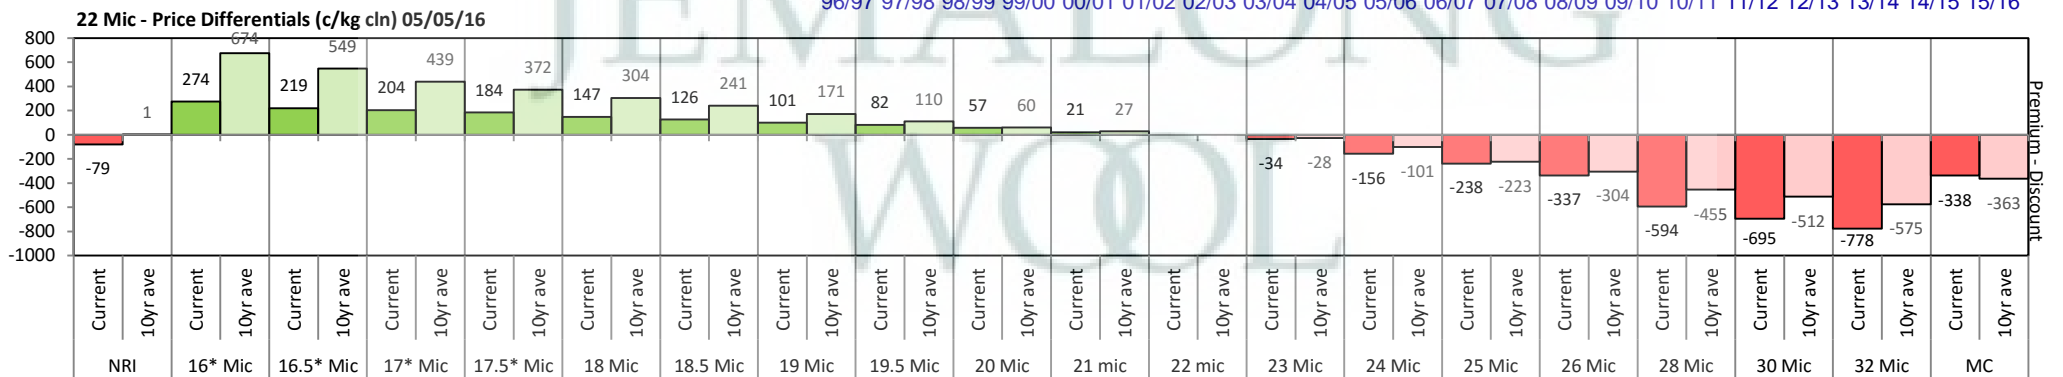

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

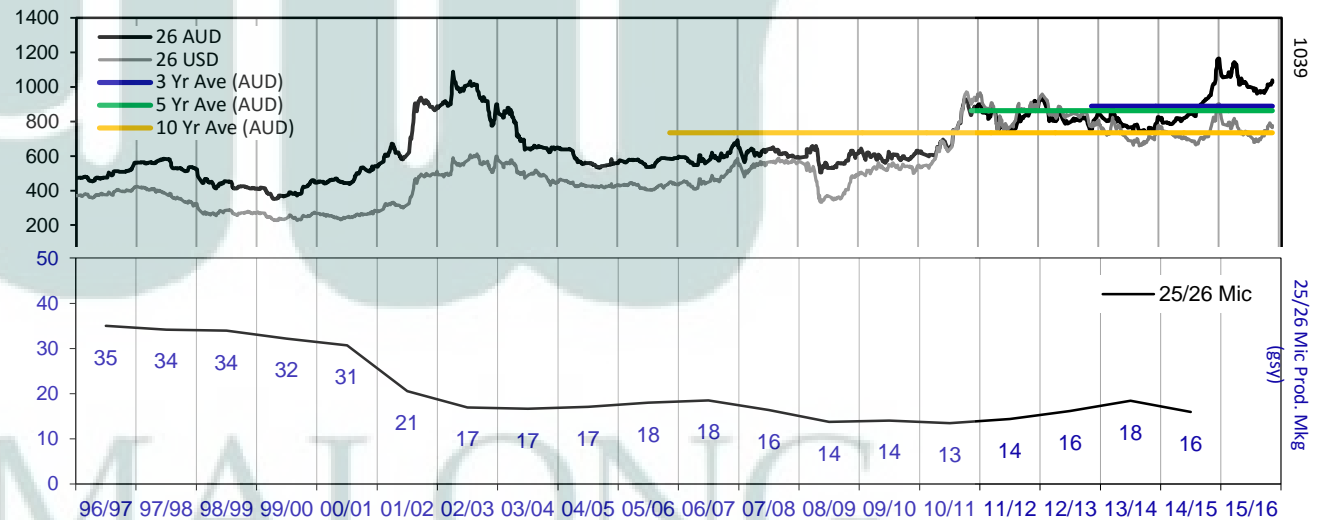

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
