Note:

Definitions:

Three and ten year percentiles shown in the table above, detail the period of time during the past 3 & 10 years that the market has traded either at or below its current price. The higher the percentile, the stronger the market.

^{*} Due to the irregular market quoting for some fine wool categories, <u>figures shown relating to micron categories below 18 micron are an estimate based on the AWEX Premium & Discounts</u>
Report & other available information.

^{*} For any category, where there is insufficient quantity offered to enable AWEX to quote, a quote will be provided based on the best available information.

^{* 10} Year data is not available for some micron catedgories, which may result in blank spaces in the table above.

^{*} A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

MARKET COMMENTARY

One Australian Dollar = 1.026340 US as of: 5/07/2012

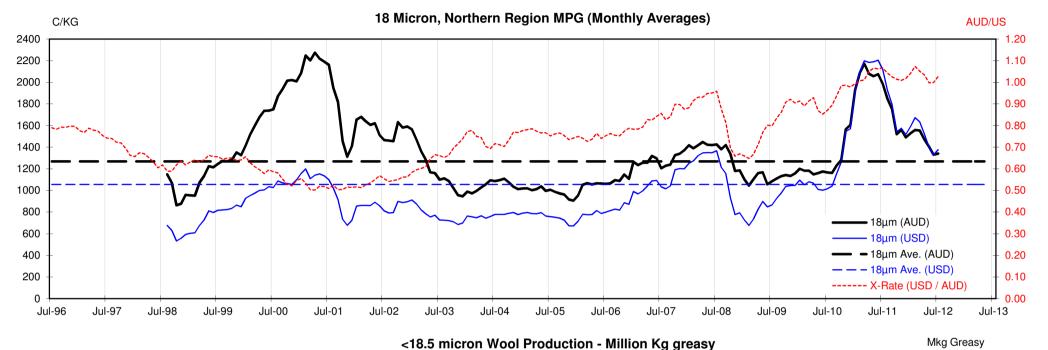

NORTHERN REGION -Sale Week 01/12 (32,682 bales offered nationally)

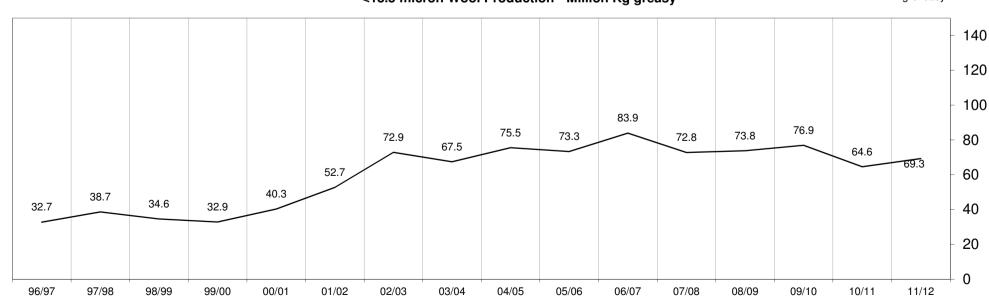

<u>Wednesdays</u> sale (the first for the new financial year and 2nd last before the 3 week July recces) had mixed results with both the fine and broad ends of the market attracting solid competition to close slightly dearer, while the medium microns eased 5-10 cents (with the more numerous 2% Vm types most affected). Skirtings found solid support closing 10 cents dearer, while locks & crutchings were generally unchanged. In the crossbreds, 30 to 32 microns fell 5 cents while others were generally unchanged. 7.3% PI

<u>Thursdays</u> market tracked sideways with only minimal movements recorded. The finer microns (16.5 - 17.5 microns) managed to firm a few cents (helped by a stylish selection of Goulburn wools, which found good support), the broader microns (22 to 24) also made some modest improvements on another limited offering, while the mid micron range was mostly unchanged with odd pockets falling 5 cents in the 18 & 19 micron area. In the skirtings, 19 to 21 microns remained firm while the finer / best length types gained 10 to 20 cents with support in this area carrying through to the higher Vm types. Locks, crutchings & stains also remained unchanged as did the crossbreds on a reasonably small offering. 4.5% PI
