^{16.5} is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorperating the existing 15 & 15.5 micron data, will be provided as a guide.

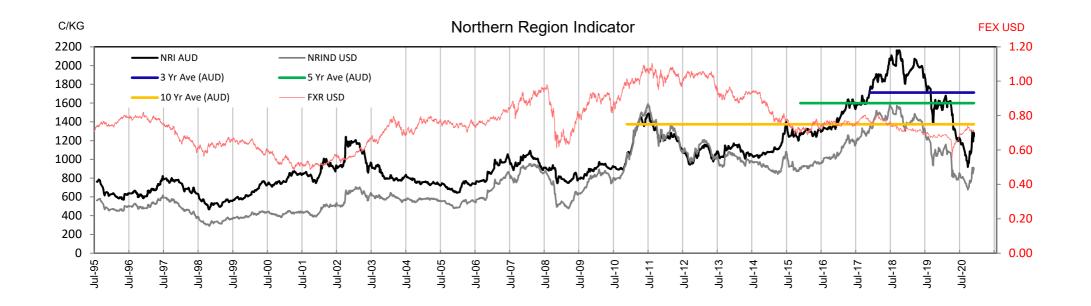

MARKET COMMENTARY Source: AWEX

The market experienced another volatile week with significant upward and downward movements occurring in succession.

On the opening day, strong widespread competition pushed the market higher with individual MPGs across the country adding 89 to 133 cents, lifting the EMI by 85 cents (7.5%). However, prices could not be maintained, as buyer sentiment softened on the second day, leaving most MPGs to close the day 30-79 cents lower, while the EMI gave back 35 cents. Despite the second day losses, the merino fleece market still recorded overall solid rises for the week, this was reflected in the EMI which added 50 cents for the series, closing the week at 1,188 cents.

The merino skirtings followed a very similar path to the fleece. Large price increases of between 80 and 140 cents on the first selling day, followed by losses of between 10 and 50 cents on the second. The oddments were the only sector to record overall losses for the series, with the three merino carding indicators finishing on average 19 cents lower.

Once again, the strong performance on day one has encouraged more sellers in to the market, with next week's national offering increasing to 41,9969 bales.

Definitions:

- * A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.
- Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.
- * Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.
- The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

 Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 2151 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1572 for 60% of the time, over the past ten years.
