<sup>\* 16.5</sup> is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. 
\* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an

estimate based on '16 micron statistics' and incorperating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWI

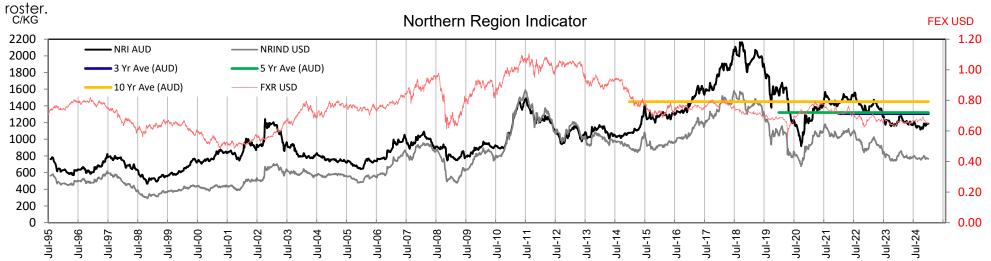

The wool market was a rather lacklustre affair this week. After a promising start which saw most types selling in the sellers' favour the Merino market closed under a degree of caution with most types beginning to falter, resulting in falls of 5-10 cents. Crossbreds did the opposite, opening cheaper, then closing slightly dearer while carding types traded dearer throughout.

The Zhangjiagang Wool Industrial Association (ZWIA) held its wool conference last weekend, Zhangjiagang is by far the largest wool processing City globally. The demand signals emanating from the delegates was downbeat but the Chinese manufacturing sector remains faithful to Australian wool.

ZWIA Chairman Dr Michel Ji stated that "the domestic market demand is insufficient, and China's foreign markets face many obstacles. Life is tough, but we live every day; business is hard, but we do it every year". GM of Youngor Wool Textile, Mr Zhou informed that "uniform fabrics saw most orders cancelled due to policy changes starting in the second quarter. Next year is expected to be a "big year" for uniform fabrics, as large enterprises may shift from importing to domestic procurement."

Conference host Mike Chu summed up by saying "To expand wool applications, we need to develop wool's unique and functional characteristics and promote it effectively". Full report on <a href="https://www.wool.com">www.wool.com</a>

Around 40,000 Australian-grown bales are on offer next week. All three selling centres will operate to the usual Tuesday and Wednesday roster.

#### Definitions:

- \* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.
- Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.
- \* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.
- The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years <a href="Example: Example: Example: "Example: Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1585"> for 60% of the time, over the past three years.</a>
  - In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1684 for 60% of the time, over the past ten years.
