^{* 16.5} is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. * Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorperating the existing 15 & 15.5 micron data, will be provided as a guide.

JEMALONG WOOL BULLETIN (week ending 6/10/2022)

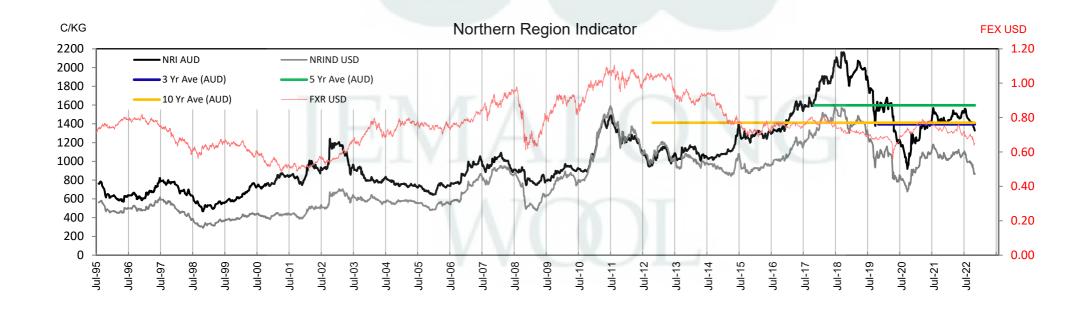

MARKET COMMENTARY Source: AWEX

Although the national offering did not exceed 40,000 bales (as forecast), there were still 7,898 more bales offered than in the previous week, with 36,042 bales available to the trade.

The finer merino fleece types again recorded the largest falls, which, when combined with general overall losses in the medium/broad merino types, crossbreds, skirtings and oddments, resulted in a 20-cent fall in the EMI, which closed the series at 1,235 (a drop of 1.6%). In an inverse pattern to the previous week, the stronger Australian dollar (compared to the US) helped stem the loss in USD terms. The EMI lost just 5 US cents for the series, a reduction of 0.6%.

The 28- and 30-micron crossbreds have continued their steady decline. This is best highlighted by viewing the MPGs in the South where 30 microns recorded no change with its MPG at its lowest point on record (297 cents). 28 microns lost 14 cents in the south, to close at 338, only 6 cents higher than its record low of 332 (which occurred in October 1999). The 28-micron MPG is now 985 (74.4%) lower than the record high reached in May 2019.

Quantities for next week reduce slightly with 35,881 bales currently forecast.

Definitions:

- * A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.
- Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.
- * Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.
- The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

 Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1675 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1674 for 60% of the time, over the past ten years.
