MARKET COMMENTARY

Northern Region Indicator gained 37 cents this week, to close at 1298. The improvement came on the back of renewed interest following the issuing of new Chinese uniform orders last week during the recess.

Also adding to this week's positive vibe was the first ever Australian wool sales being held as a feature of the International Wool Textile Organisations (IWTO's) annual conference, which saw a record 422 delegates attend from 28 countries.

Tuesday's Sydney only sale saw the finer MPG's gain 30-40 cents with the lower spec types most affected, while the medium to broader microns posted rises of 40-70 cents. Wednesday's market saw a further 10 cents added at the finer end, while 19 microns and broader gained an additional 15-20 cents. Wednesday sale was the opening sale in Melbourne & Fremantle and as a result both centres played catch-up rising 30-40 cents in the finer microns and 60-70 cents in the medium to broader microns.

On Thursday, no sales were held in the North and a more tentative mood left Melbourne and Fremantle to close 5-10 cents cheaper across most micron price guides.

With falling production and the lack of greasy stock throughout the pipeline, we can expect to see a bumpy road ahead with price largely dictated by the hand to mouth ordering pattern of the early stage processing sector.

Next week's sales will be held in all three centres with volumes originally forecast at 43,960 bales, however this week's rise will flush extra bales onto the market and as a result the sale will be larger than originally forecast.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1284 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1220 for 60% of the time, over the past ten years.

Table 4: Riemann Forwards, latest trades as at: Last Date

Any highlighted in yellow are recent trades, trading since: Friday, 1 April 2016

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 12: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
