AU BALES OFFERED		25,338	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. * Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

**MARKET COMMENTARY** Source: AWEX

The market continued to deteriorate this week, with buyer demand waning as the sale progressed. 11.8% of the offering was withdrawn prior to sale, bringing the national quantity down to 25,338 bales. Good style wools and those with favourable AM results, were still in high demand and those wools were the least affected by the falling market. The large numbers of lesser style wools and those with poor AM results, did not receive the same support. By the end of the series the individual MPGs across the country fell by 21-87 cents.

The NRI lost 45 cents for the series, closing the week at 1,214, which is its lowest level in 5 years, however it remains 469 cents above the 2009 low which followed the Global Financial Crisis (GFC). When viewed in USD terms (the main currency in which wool is traded), the NRI is now at its lowest level in 10 years, however remains 308 cents above the low that followed the GFC.

Although the market has been in decline over the previous few months, a positive point to note, has been the resilience of the Australian wool industry as a whole. Since shutdowns and restrictions were first enforced in Australia in Week 38, sales across the country have continued under adverse conditions, with all industry stakeholders working together to ensure that wool auctions continue. During this time, over 250 million dollars' worth of wool has been transferred from Australian growers to overseas exporters.

Next week's national offering increases slightly to 25,660 bales.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 2142 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1572 for 60% of the time, over the past ten years.

# JEMALONG WOOL BULLETIN

(week ending 6/05/2020)

Page 10/27

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

# JEMALONG WOOL BULLETIN

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
