AU BALES OFFERED		42,419	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. * Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWEX

The market recorded an overall gain in this series, driven by solid increases in the fine merino fleece sector and further aided by currency movements. The national offering dropped by 1,680 bales to 45,228 bales in the first three-day sale since May. The EMI gained 11 cents to close the week at 1,177 cents.

With only two selling weeks left, this week's sale was important for exporters needing to finish orders before the recess. In the Merino fleece types, wools possessing faults such as lower tensile strength or higher VM, brought similar money to wool free of these faults, as buyers fought hard to secure lots that suited their specific needs. The largest gains were recorded in the finest microns, with Merino fleece 18 microns and finer, adding between 14 and 71 cents. All merino fleece MPGs rose, only the 19.5-micron MPG in the North bucking the trend, posting a 7-cent loss. The skirting sector tracked a similar path to the fleece, while the crossbred and oddment markets had an up-and-down series, with little overall change recorded.

Week 24 will host the final sale of the 2023 calendar year, with sales then heading into the annual three-week Christmas recess. 50,550 bales are expected to be offered in Sydney, Fremantle and Melbourne, which again requires three selling days.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1658 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1465 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
