MARKET COMMENTARY

Week 50 saw a small offering with just over 24,000 bales put before the trade as Fremantle took a weeks break.

The first selling day saw the market suffer further price reductions, resulting in 19 micron and finer losing 20 to 30 cents in the Northern Region, bringing prices closer in line with the Southern Region, and although the NRI recorded a 12 cent loss it actually rose 5 cents in USD terms due to the rise in the Australian dollar.

The second day of selling saw a complete turnaround, with all types and descriptions experiencing rises, generally between 15 and 30 cents with better style and spec wools enjoying the largest gains. The NRI posted a 10 cent lift to close the week only 2 cents behind at 1545.

The skirting market followed the lead of the fleece market, prices dropped on the first day, only to have those losses generally recouped on the second. Main buyer interest continues in wools containing less than 5.0% vegetable matter or lots possessing excellent test results. The crossbred market was a different story in each centre, general increases of 5 to 10 cents in the North compared to general decreases of 5 to 10 cents in the South. A very limited number of cardings remained generally unchanged for the week, which was reflected in the two carding indicators experiencing very little movement.

Fremantle joins Sydney and Melbourne on the roster next week and as a result the national offering has increased, currently just over 33,800 bales are scheduled for sale.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1466 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1292 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
