MARKET COMMENTARY

The first open cry Auction sale following the annual three week “winter” recess, defied the trend of recent years with a reasonably strong opening. 44,925 bales were offered for sale with a clearance rate of 93.1%, leaving the Northern Region Indicator ahead by 12 cents.

It was the finer merino fleece categories that benefited the most, gaining 30-50 cents before easing slightly on Thursday. Medium merino fleece finished the week slightly dearer as did the stronger crossbred categories; however 21 to 26 microns did not fare so well, with losses of 5-20 cents recorded. The oddment market was fully firm to slightly dearer while skirtings were generally 20-40 cents dearer.

Anecdotal reports suggest there are reasonable quantities of spring orders to be filled. This combined with our weaker AUD and with lower volumes of wool coming onto the market; prices are not expected to slip too far in the short term.

Decile Tables are a useful tool for working out price targets.

Percentiles are a more accurate guide to where the market is currently trading (The higher the percentile, the stronger the market).

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 year

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1413 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1101 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 8: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.
