MARKET COMMENTARY

With a jump in the AUD this week the market eased 5-10 cents in the finer micron categories, while the medium to broader microns retreated 20-30 cents. However when viewed in US dollar terms the market was actually 10-20 cents dearer, which is in line with comments passed by the trade during the sale.

The series commenced to a NZ-only catalogue (the first in 7 months) on Tuesday which set the tone for the rest of the week. The more stylish types continued to maintain strong support and gained ground, but the few lower spec types eased back 10 cents. The Australian offering followed suit on Wednesday with a similar pattern. Spinners and stylish 40nkt to 50nkt types all found strong support and added 20 cents clean. However weakness was evident in part tender types, and also the broader microns, which all fell 20 cents. Thursday's merino fleece market saw initial losses of 10-20 cents generally being re-gained over the course of the day to leave most types only slightly lower.

Merino Skirtings maintained reasonably consistent support throughout the week, and the losses were fairly modest, while Merino Cardings were a bit quiet, leaving the MC indicator 7 cents cheaper for the sale.

A fairly small selection of Crossbred wool had mixed results. 25/26 microns continued to find favour and remained firm while the broader range of 28 to 32 lost further ground, as much as 50 cents on the very broad edge.

Next week's offering is forecast at 38,231 bales (a slight reduction on the previous estimate).

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1356 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1245 for 60% of the time, over the past ten years.

Table 4: Riemann Forwards, latest trades as at: Last Date

Any highlighted in yellow are recent trades, trading since: Friday, 2 September 2016

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
