Note:

* Due to the irregular market quoting for some fine wool categories, figures shown relating to micron categories below 18 micron are an estimate based on the AWEX Premium & Discounts Report & other available information.

* For any category, where there is insufficient quantity offered to enable AWEX to quote, a quote will be provided based on the best available information.

* 10 Year data is not available for some micron catedgories, which may result in blank spaces in the table above.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown in the table above, detail the period of time during the past 3 & 10 years that the market has traded either at or below its current price. The higher the percentile, the stronger the market.

MARKET COMMENTARY

One Australian Dollar = \$ 1.03 US, as of 8/12/2011

NORTHERN REGION - Sale Week 23/11 (52,913 bales offered nationally)

<u>Wednesdays</u> market was generally 20 to 30 cents weaker. Fine microns of less than 17.5 retreated by 30-40 cents, 18 micron and broader were generally 20 cents cheaper with the exception of 21 microns which lost 30 cents. Merino skirtings were mixed, with the lower Vm finer microns (<19 um, <5% Vm) 10-15 cents off the pace, while the broader microns and better length lots remained generally unchanged. Fine locks closed up to 50 cents cheaper, while 19 micron and broader were only reduced by 10 cents. Crutchings & stains remained generally unchanged. The crossbred market drifted 10-15 cents lower for 26 to 32 microns with a small pocked of 27 microns defying the trend to hold firm . 8.0% PI

<u>Thursdays</u> market saw support sustained for the finer microns, while the rest of the market retreated. 17.5 microns and finer closed unchanged, where as 18 to 19.5 microns were generally 10 cents lower with 18.5 microns least affected (on the back of good interest for the better style & strength lots). 20 to 21 microns lost 25 cents while 22 & 23 microns closed firm on a limited selection. Merino skirtings saw the burry types remain firm while the lower Vm types eased 10-20 cents (closing the gap between Vm ranges). All oddments lost ground with locks up to 30 cents cheaper, crutchings 20 cents cheaper and stains 10 cents lower. Crossbreds were only just off the pace, with 26 microns and broader par to 5 cents easier. 12.4% Pl

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
