MARKET COMMENTARY

The spike in price over the past month has flushed additional wool onto the market, resulting in an 18% increase in volume this week (making it the largest sale since January).

Some cracks in the market were starting to emerge late last week, with reports that some orders had been filled and that more orders would be needed to keep the market firing. AWI also reported that there are some issues around the Chinese annual CSQ (country specific quota), with many mills fulfilling this year's allocation early. As a result it was no surprise that the market corrected upon opening in Melbourne on Tuesday.

Wednesday then brought Sydney and Fremantle's markets into line with Melbourne's and while the "out of spec" types were neglected the better types with low cvh results attracted the most support. Thursday's market consolidated and even managed to post some small gains, giving a positive signal in an otherwise negative week.

The largest Crossbred offering since January defied the soft market noted in the merino sector and finished the sale dearer for the 28 to 32-micron range. Oddments also fell on the first day and then rebounded to finish generally 10 cents lower for the week.

Next week is the final sale before the annual three week Christmas recess and quantities have increased to 56,122 bales.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1403 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1263 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 13: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
