MARKET COMMENTARY

Despite the increased quantity, prices continued to rise this week with the NRI closing 23 cents dearer at a new record of 1605 c/kg.

As with recent sales, micron was the focus and it was 19.5 micron and finer which posted the most significant increases (generally 30 to 70 cents for the week). The broader microns, in particular 21.0 micron and coarser struggled to find the same buyer support and recorded losses of 5-20 cents with inferior / lower spec types experiencing the largest falls as buyers became more selective in their purchases.

The skirting market tracked a similar path to the fleece market, with the finer better style lots gaining 20 to 30 cents, while the broader microns retreated 10 to 15 cents. The oddment market continued along its upward trajectory with all three centres rising on every selling day and in line with the rest of the market it was the finer microns that drove the indicators higher as buyers sought out the finer microns wherever they could.

The crossbred market continued to recover with prices pushing higher for the fourth consecutive week. Again it was the finer microns that benefited the most.

As the market continues to rise so too does the number of willing sellers being enticed to the market, the national quantity for the following sale remains high with almost 44,000 bales currently rostered for sale next week.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1421 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1280 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
