AU BALES OFFERED		47,915	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																		
AU BALES SOLD		41,683	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.																		
AU PASSED-IN%		13.0%																			
AUD/USD		0.6610 -2.1%

MARKET COMMENTARY Source: AWI & AWEX

47,915 bales were on offer this week, the fifth consecutive sale above 47,000 bales. Despite the sizable offering, the market only gave up 10 cents overall, with the EMI finishing the week at 1358, with 13% PI.

In the merino fleece sector, the main buyer focus continued to be on better-style wools. Those carrying less than 1.5% VM and wool possessing favourable AM results. The strong demand for these types resulted in minimal weekly price movements. Lesser-style, higher VM lots and wool with less favourable AM results were highly irregular and trended lower as the series progressed. These wools were the impetus behind the lowering of many MPGs and accounted for many of the passed-in lots.

The movements in the MPGs across the regions ranged between +20 and -46 cents. The currency continues to play a large role in determining market movements. If it wasn't for the weakening of the Australian dollar, the falls in the market would have been more substantial, with the EMI having fallen 28 US cents for the series.

Next week all centres will be selling on Wednesday/Thursday only, due to a Public Holiday in Melbourne.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1659 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1433 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 10: Returns pr head for skirted fleece wool.
