MARKET COMMENTARY

The wool market continued to deteriorate this week despite the smallest catalogue in 12 months being put before to the trade. The AWEX Northern Region Indicator fell 31 cents to close at 1292 cents. Foreign Exchange continues to be an influencing factor with the AUD strengthening 2 cents when compared to last week. In US terms the market actually rose, with the NRI gaining 6 cents.

The trend was lower from the outset and prices fell as much as 40 cents on the opening day. Thursday was mixed, with Melbourne continuing to drift lower whilst Sydney was only marginally cheaper and even managed to eke out small gains in some microns. The finer microns were the hardest hit during the week, particularly part tender and less stylish types. Conversely, the limited average Spinners types continued to attract good competition and were largely in line with the previous sale. Less than 45% of the Merino Fleece sector was in the highly sought after 1% vegetable matter (VM) and lower range, which was the lowest percentage for the season. Prices for Merino Skirtings were trimmed back but the reductions were not as significant as those in the fleece catalogue, the lower VM types continued to attract strong demand. Crossbreds lost 20 to 30 cents for the week on limited volume. Merino Cardings were also cheaper for the week, losing 20 cents.

Fremantle returns to the selling schedule next week, bringing the total national offering to almost 35,000 bales.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1291 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1230 for 60% of the time, over the past ten years.

The above '**Rise or Fall**' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The '**Monthly Price Movement**' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
