AU BALES OFFERED		49,431	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																				
AU BALES SOLD		44,462	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWEX

The market recorded an overall increase this series. However, the forecast offering of 51,647 bales did not eventuate, with 49,431 put before the trade.

Logistics issues continue to dog the trade, with reduced shipping availability and increased freight times affecting buyer finance. Combined with reports that dumps are now at near-maximum capacity, these issues were concerning to some exporters, prompting them to speculate that losses could be significant. Thankfully, these expectations were not realised; instead, the market recorded upward movements in nearly all sectors. By the end of the series, the individual MPGs for merino fleece ranged from fully firm to 26 cents dearer, with only 16.5 microns in the South posting a small loss (-14 cents). Merino skirtings followed a similar path to the fleece, with general rises of 10-20 cents recorded.

The crossbred sector also managed general increases, with 28 to 32 microns adding 1-13 cents for the week. The EMI rose by 6 cents for the series, closing the week at 1,413.

Next week's sales will again be held on Wednesday and Thursday (due to a Monday Public Holiday in Melbourne). 48,544 bales are currently expected to be offered.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1702 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1633 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
