AU BALES OFFERED		34,168	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. * Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWI

Alongside the rest of the world, Australian wool auctions operated under the most tumultuous week of confidence-sapping factors seen for quite some time. The well-publicised tariff imposition by the USA on all its trading partners has caused absolute mayhem across all markets and the wool and textile world was no exception.

All participants grappled with the potential outcomes and consequences of these third-party actions. Our major trading partner in China was the most heavily targeted of nations yet they stood tall in this week's auctions and continued purchasing operations to a relatively normal, stable, and well-measured strategy. This helped impart confidence to the local operators and our largest trading exporter subsequently maintained a heavy buying rate.

Thankfully in some sense, our ridiculously weaker Australian dollar against almost all other currencies on the foreign exchange (forex) boards stepped in to keep wool prices stable and in fact pushed dearer for the week in our local currency. The real story though was wools devaluation by 3.1% to 4.2% on a Chinese Yuan (CNY) and US dollar (USD) basis respectively and an even heftier 6.5% lower value on buyers using the Euro.

If things normalize from here on and those forex rates remain in play, this week could turn out to be a bit of a boon for sellers getting paid in AUD going forward. On the surface, wool is now looking good value in all those foreign currencies given the world was seemingly heading into a lower inflationary and a lower interest rate environment prior to this week's events.

The 2021 IWTO produced figures show that the USA imported 20,867 tonnes out of the 219,793 tonnes imported by countries across the globe of finished wool and wool-rich garments and fabrics. That represents 9.5% of the world's wool apparel/products from all nations so minimal increased consumption from the rest of the world's consumer markets could easily absorb this rather than sell into the US at a 104% tariff (China) or Italy at 20% plus rates.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1529 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1684 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
