Note:

\* Due to the irregular market quoting for some fine wool categories, figures shown relating to micron categories below 18 micron are an estimate based on the AWEX Premium & Discounts Report & other available information.

\* For any category, where there is insufficient quantity offered to enable AWEX to quote, a quote will be provided based on the best available information.

\* 10 Year data is not available for some micron catedgories, which may result in blank spaces in the table above.

Definitions:

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown in the table above, detail the period of time during the past 3 & 10 years that the market has traded either at or below its current price. The higher the percentile, the stronger the market.

## MARKET COMMENTARY

One Australian Dollar = \$ 1.01 US, as of 10/05/2012

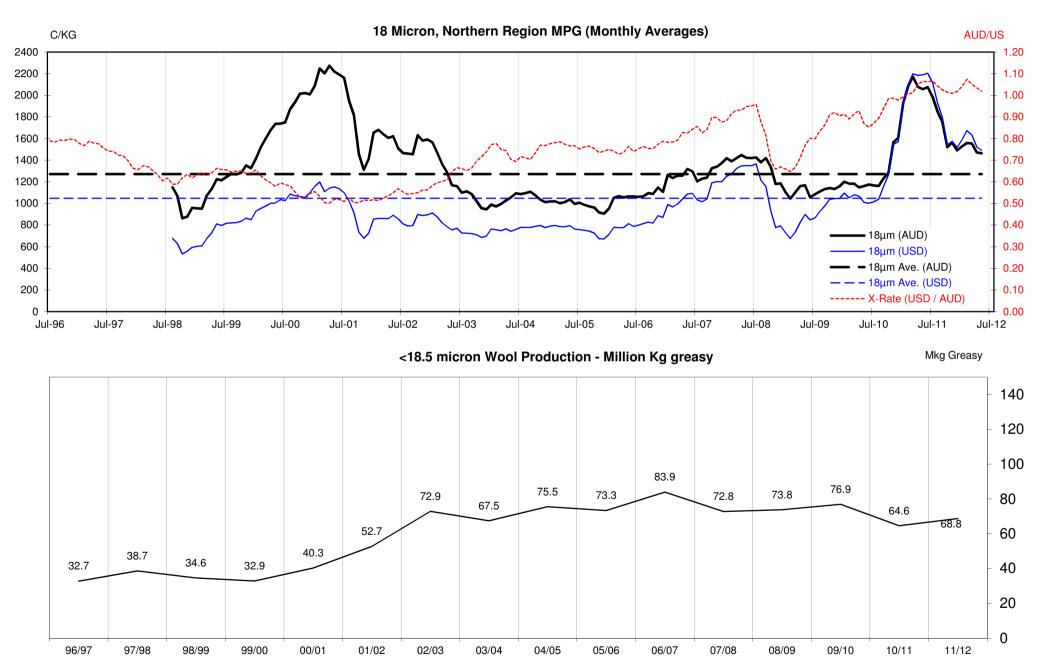

## NORTHERN REGION – Sale Week 45/11 (34,962 bales offered nationally)

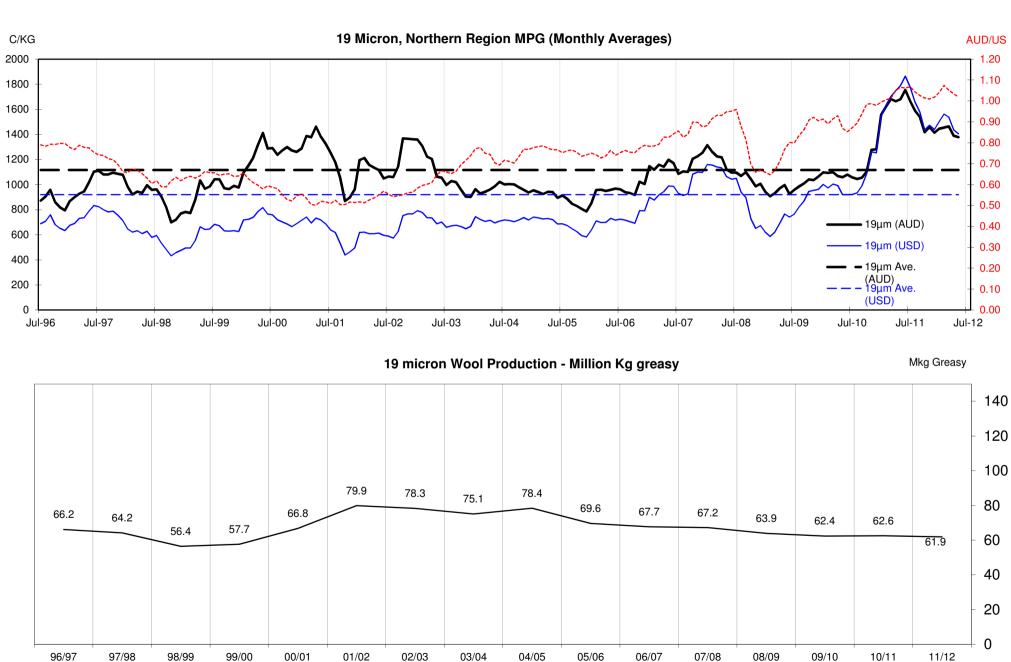

<u>Wednesdays</u> market saw the prices ease by 5-10 cents. Medium micron fleece lost up to 10 cents, while the broader microns were 3-5 cents cheaper. Lower Vm types were least affected, while the higher Vm types, LB & B fault came under pressure contracting by 20-30 cents. Fine microns were well supported for the better style & strength types, while the lower style & strength types suffered some discounting. Merino skirtings were in line with the fleece market, generally closing 10 to 20 cents cheaper for 18 to 20 microns with </=6% Vm. Locks continued to ease throughout the day and closed 10 cents lower, while crutchings & stains remained unchanged on a limited offering. A poor offering of quotable types in the crossbreds, left 28 to 30 microns firm on a nominal basis. 10.4% PI

<u>Thursdays</u> market ended the day on a soft note as the AUD held firm (just above parity). 18 to 19 microns slid up to 10 cents cheaper while 19.5 micron and broader ended par to 5 cents easier. LB & B faults were 20 cents cheaper for the medium microns while 20 micron and broader remained unchanged. Merino Skirtings were irregular with heavy discounting for cot and colour while the remainder of the offering were generally unchanged with some of the finer microns up to 10 cents easier. Locks improved from the start of trade, to end the day 10 cents dearer, with crutchings unchanged. Stains however closed 30-40 cents cheaper. Crossbreds ended the day 10 cents cheaper for 28 to 30 microns (on a limited offering) 10.7% PI

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
