MARKET COMMENTARY

Sales resumed on Tuesday after the annual mid-year recess and despite the increased volume and higher exchange rate the NRI only shed 5 cents as buyers fought to cover orders sold over the break. Wednesday saw Fremantle join the sale as the market established a firm direction, leaving most types 15-30 cents dearer. The final selling day saw similar rises which helped push the NRI to 1614, a rise of 26 cents for the week (47 cents US).

The skirting market also experienced gains but not to the same extent as the fleece. Prices generally rose 10 to 20 cents with buyer focus centred on the lower vm (<3.0%) and more stylish types. The crossbred market also performed very well with the largest increases enjoyed by the better prepared lines. 28 to 30 micron were the most affected, with rises of around 50 cents. The carding market was the only poor performer for the week, with the Eastern markets suffering corrections of 20-40 cents.

Next week sees a reduction in quantity, currently there is just over 38,500 bales rostered for sale nationally.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1492 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1302 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 10: Returns pr head for skirted fleece wool.
