MARKET COMMENTARY

In contrast to recent auctions where there has been a clear direction and final result, this week the AWEX-EMI registered only a small movement over the sale. The two cent rise tended to mask a reasonably turbulent market; initially rising strongly before losing sizeable ground on Thursday.

The gains on the first day were most felt in Melbourne and Fremantle where there were increases of 20 cents clean for most of the Merino Fleece sector. Sydney was more composed, firming by 5 cents, however that centre had been well ahead due to its outperformance during the previous sale. Despite the overwhelming positive tone, Thursday followed up with a sharp reversal in direction for the medium and broader microns. The east-coast only encounter registered a drop of 20 cents through the 19 to 22-micron range and gave that sector a negative net result for the week. The finer microns were less affected, and even displayed a firming tendency for the more stylish 40nkt types after receiving good support.

Merino skirtings followed a similar more stable pattern, opening with moderate rises before easing back on the final day. Crossbreds were driven higher on both days on the back of a small offering. The limited 25/26-micron range recorded strong growth, mainly on the last day when they jumped 30 cents. The Merino Carding Indicators posted another steady result, continuing their climb back to the 1100-cent level.

40,755 bales are expected next week nationally, including a three day Melbourne sale.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1241 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1194 for 60% of the time, over the past ten years.

Table 4: Riemann Forwards, latest trades as at: Last Date

Any highlighted in yellow are recent trades, trading since: 4 September, 2015

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 8: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
