AU BALES OFFERED			* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																	
AU BALES SOLD			* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWEX

The market had an up-and-down series this week, gaining ground on day one, then losing it on day two. Nationally, 23,486 bales were offered (1,535 fewer than the previous series). By the end of the first day, movements in the merino fleece MPGs ranged from unchanged to plus 37 cents in the East, while the West had mixed results (from minus 41 to plus 49 cents), with their finer microns rising strongly, and their broader microns posting losses. Tuesday's EMI closed at 1893, up 3 cents for the day, or 17 cents in US dollar terms.

Day two recorded general losses across all merino types and descriptions, with the broader microns recording the largest losses and the finer microns holding up reasonably well. In the East, MPG movements for 17.5 micron were unchanged to minus 7 cents, while 18 micron and broader lost 10-40 cents. The EMI shed 15 cents for the day (-9 cents US) to close at 1,878, down 12 cents for the series.

The total value sold continues to track well above last season, with \$429 million sold season to date (\$89 million more than the previous season).

Next week's offering is forecast to increase. Nationally, 30,185 bales are currently expected to be on offer.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1541 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1763 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 10: Returns pr head for skirted fleece wool.
