## MARKET COMMENTARY

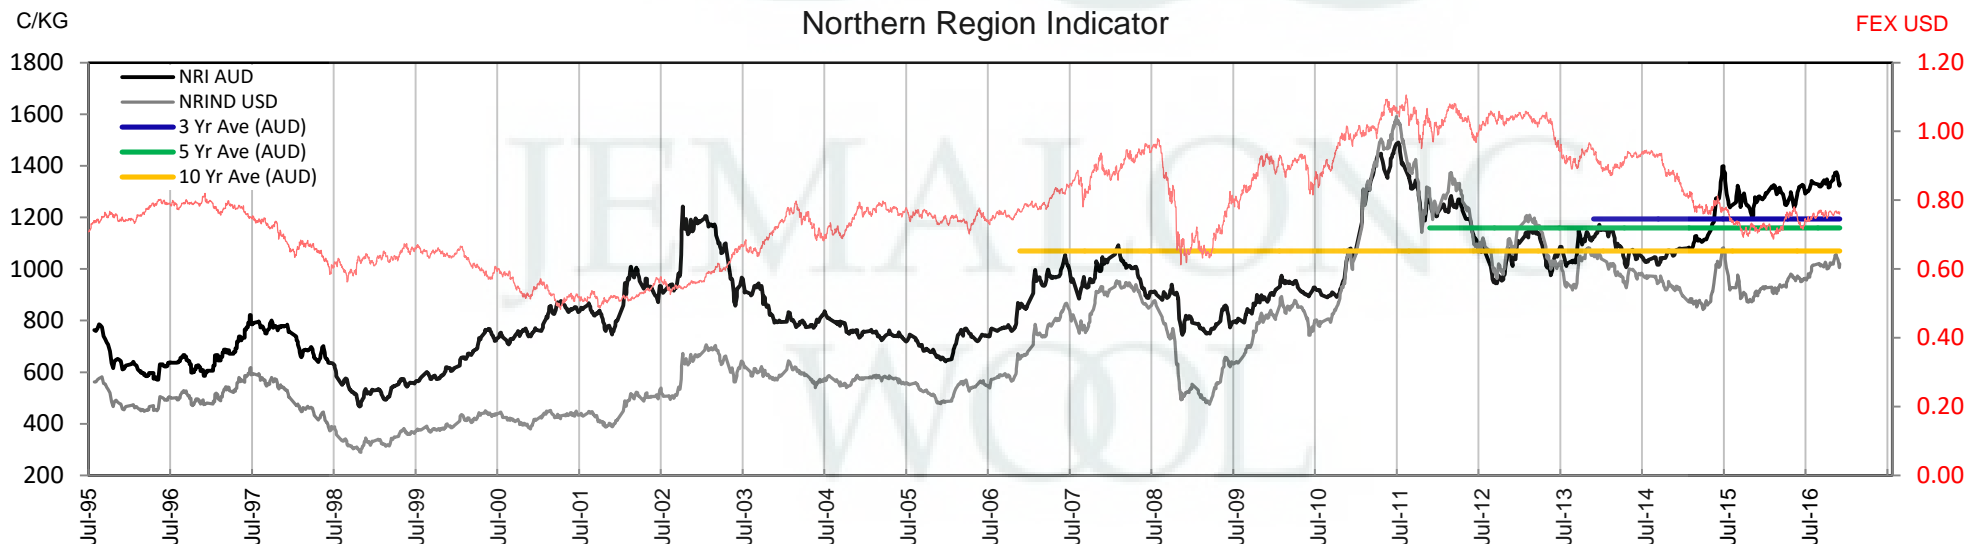

It was a similar sized offering to last week at just over 47,000 bales making it the third largest for the season. Noteworthy, but unrelated to the wool market, was the USA elections which were held during the week and the subsequent volatility to stock, currency and bond markets. Perhaps coincidentally the wool market was also characterised by variable movements with the NRI initially dipping 25 cents before recovering 8 cents on Thursday to close the week a net 17 cents lower at 1331.

Heavy losses were quoted on the first day, with inferior types most affected as buyers focused their purchases on the better style types which held up reasonably well. Day two of the sale had a dramatically different tone, buyer interest increased and the fall in prices was halted. Most types and descriptions were generally 10 to 20 cents dearer, making it the first daily rise in six consecutive trading days.

The skirting market tracked the fleece market, losing 20 to 30 cents on the first day and regaining 15 to 20 cents on the second day. A large selection of oddments made it the largest offering since January, subsequently leaving most types 15-20 cents cheaper. The Crossbred market also lost ground with 20-30 cent reductions for some microns.

Next week sees another similarly large offering with 50,000 bales rostered for sale in Melbourne, Sydney and Fremantle.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1393 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1260 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
