AU BALES OFFERED		31,095	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. * Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWI & AWEX

Although the market recorded another overall loss, falling for the third consecutive selling series, there were positive signs toward the end of the week and some small positive movements within individual microns and types.

31,095 bales were offered Nationally after 9.6% were withdrawn prior to sale. 14.1% of those bales failed to meet seller expectations and were subsequently passed-in, resulting in 26,696 bales changing hands by the close of trade. Year-to-date 531,122 bales have been sold, which is 3.9% (almost 20,000 bales) more than for the same period last season.

The largest losses were again felt on finer merino fleece types in the Eastern centres. This was reflected in the individual MPGs, which for 18 microns and finer, fell 33-91 cents. All other merino MPGs ranged from -3 to -22 cents. By the end of the series, the EMI had lost 20 cents, closing at 1,241 (in USD terms, it was virtually unchanged). The EMI is now 78 cents lower than the corresponding sale of the previous season, a drop of 5.9%.

Next week's offering increases. Currently, there are expected to be 36,941 bales on offer.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1664 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1675 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.
