**Note:**

\* Due to the irregular market quoting for some fine wool categories, figures shown relating to micron categories below 18 micron are an estimate based on the AWEX Premium & Discounts Report & other available information.

\* For any category, where there is insufficient quantity offered to enable AWEX to quote, a quote will be provided based on the best available information.

\* 10 Year data is not available for some micron categories, which may result in blank spaces in the table above.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown in the table above, detail the period of time during the past 3 & 10 years that the market has traded either at or below its current price.

The higher the percentile, the stronger the market.
