^{* 16.5} is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. * Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorperating the existing 15 & 15.5 micron data, will be provided as a guide.

(week ending 12/04/2024)

MARKET COMMENTARY Source: AWEX

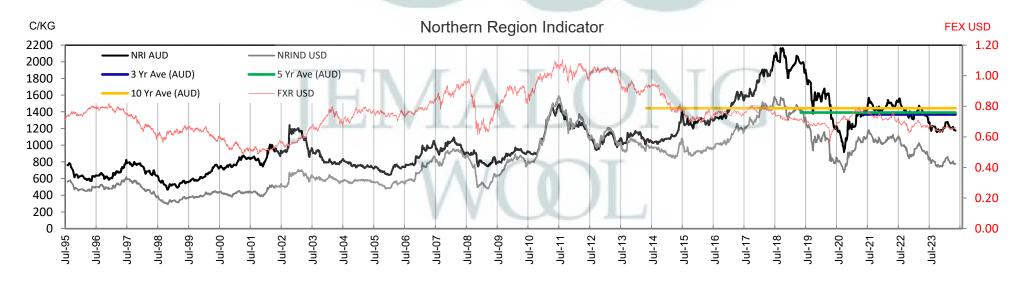

Sales resumed this week after the one-week Easter recess, as a result, it was a larger offering, comprising 50,148 bales (after 7% were withdrawn before sale). It was also the largest sale since the opening sale of the calendar year.

The market opened softer on Tuesday, due to exchange rates having reduced the purchasing power of buyers trading in US dollars. As a result, there were general losses across the merino fleece sector and the EMI finished the day 6 cents cheaper. However, when viewed in USD terms the market gained ground, by adding 5 US cents.

Currency movements were limited on day two, as a result, the EMI recorded a 2 and 4-cent rise in AUD and USD terms respectively.

On the third day, only Melbourne was in operation, and an overnight fall in the AUD assisted a dramatic turnaround, with strong rises in the merino fleece sector, helping to push the EMI up by 4 cents. By the close of trade, the EMI was unchanged for the week (in local currency terms), while slipping only 1 cent in US dollar terms.

Next week will see 46,411 bales offered on Tuesday & Wednesday.

Definitions:

- * A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.
- Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.
- * Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.
- The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years for 60% of the time, over the past three years.
 - In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1471 for 60% of the time, over the past ten years.
