## MARKET COMMENTARY

Week 45 saw just over 38,000 bales offered for sale. On the first day of selling the market opened very solidly in the Eastern States with most types and descriptions selling at similar levels to those achieved at the previous sale, leaving the NRI unchanged at 1639. However the Fremantle market slowly deteriorated throughout the sale and despite their strong start most types had lost 10-30 cents by the close of the day.

The tone evident towards the end of the first day, was apparent from the beginning of the second day, with lower spec wools being the hardest hit as prices were generally reduced by 15 to 30 cents. The NRI lost 24 cents on day two to close the week at 1615.

The skirting market was strongly influenced by vegetable matter. The low VM lines (<3.0%) were highly sought after and finished the week relatively unchanged, while the higher VM levels suffered decreases of 20-40 cents, with wools >6.0% vm the most affected.

The crossbred sector was resilient in a falling market with most types and descriptions recording modest rises for the week, generally between 5 and 10 cents. The oddment market also had a solid week with most types and descriptions tending slightly dearer.

Next week will see 36,343 bales put before the trade.

**Definitions:**

- \* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.  
Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.
  - \* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.  
The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.
- Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1458 for 60% of the time, over the past three years.  
In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1290 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
