AU BALES OFFERED		43,454	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																	
AU BALES SOLD		32,694	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.																	
AU PASSED-IN%		24.8%

MARKET COMMENTARY Source: AWI

Prices at this week's Wool auctions were adversely affected by foreign exchange rates which were the predominant price-making factor. The Australian dollar (AUD) strengthened by 1.5% against the US Dollar placing direct downward pressure on the AUD price. By the end of the series, the EMI had lost 2%, but the damage to the WMI was more severe at 4.1%, which could have been worse if the clearance rate had been higher (41.9% of the WA offering was passed in).

Whilst demand remains slow and sluggish, outstanding orders to fill from forward book operators helped the sticky market situation with their buying and obviously bought at advantageous rates compared to sold prices throughout the week. China indents appeared specific for type and volume restricted but influenced sale outcomes. The China top makers also made a significant contribution, and they lifted buying rates as prices weakened and they followed the market down. In such a weak market, the top makers were able to acquire much better specifications on sale lots than usual.

The superfine Merino wools (finer than 18.5 micron) were again the most in-demand types but falls of 20-40ac were still registered. Euro and Indian buyers are still apparent in this area, but their buying has slowed for the time being, and more volumes of the better-specified super fine lots appeared to be purchased for Chinese orders. The larger percentage losses in the Merino sector were for the wools broader than 18.5 microns, the Fremantle centre having losses of around 75ac in this area. However, the FNF lots were far less affected in all micron sectors.

Skirtings sold at similarly lower levels to their fleece counterparts, although their price falls were not as great, with losses of 40-50 cents occurring. Buyers were more attracted to the lower VM skirtings and as such, their prices were not as affected. Cardings were 25ac lower (continuing their soft run), while surprisingly the crossbred wools were best-performing sector, selling unchanged to 5ac lower, than the previous week's close.

The clearance rates suffered greatly this week, with just over 75% of the offering changing hands. Rostered volumes spike to near 49,000bales next week, with sales to be held on Tues/Wed and Thursday.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1660 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1448 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 10: Returns pr head for skirted fleece wool.
