AU BALES OFFERED		31,147		* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																				
AU BALES SOLD		26,921																						
AU PASSED-IN%		13.6%		* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.																				
AUD/USD		0.6744 1.1%

MARKET COMMENTARY Source: AWI

Prices were largely depressed at this week's auctions. The strengthening AUD against the USD and CNY was responsible for around two-thirds of this week's losses, and the necessary change to the languid demand scenario was not forthcoming.

Merino descriptions were most affected, in particular, the superfine types, which have been struggling as the global market adjusts to lower consumer spending while also adapting to increased production of fine wools.

Two of the top three Chinese top makers slowed their purchases down this week but stayed in touch. The largest Australian-based trader was the most obvious omission from the top of the Merino fleece buyers list; however, the next largest trader showed some strong buying intention, filling that gap admirably. Perhaps the most notable positive from the week was the buying of two European-based processors who took a large percentage of the better 18 to 20-micron wools.

As far as logistics are concerned, almost all major container lines remain in total avoidance of the Suez route due to the danger and soaring insurance premiums. Freight rates and associated costs have soared by having to sail the extra week around Africa. This places extraordinary demand upon vessels and containers globally as both the ship and container are out on the water, and out of play, longer. Initially, unused capacity was scarce, and since then, the industry's ability or appetite to add further infrastructure has been limited at best. This has meant soaring rates for container shippers, of which greasy wool and wool tops, yarn, fabric, and garments are all affected. The average worldwide cost of shipping a 40-foot container hit approx. A\$6,240 during June which is more than triple the cost a year prior and the highest rates since the covid impacted freight rates of September 2022.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1656 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1469 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 10: Returns pr head for skirted fleece wool.
