MARKET COMMENTARY

Sales resumed this week after the annual three week Christmas recess with a national offering of 51,379 bales. There were sharp rises over the three days leaving the AWEX Northern Region Indicator 78 cents higher at 1490, its highest level in 5 ½ years and only 1 cents short of the all-time high in June 2011.

Sentiment on the first sale day of the new calendar year was extremely positive from the outset when Melbourne sold in isolation on Tuesday. Sydney and Fremantle joined the selling roster on Wednesday and the rises continued. Thursday was more subdued but still managed increases of 20 to 30 cents. Net results for the week were widespread with increases of 70 to 150 cents recorded, with the finer microns enjoying the most support and extending their premiums over the broader microns who's rises were less extreme.

As buyers scrambled for quantity lower spec merino fleece types were carried along with the better types. It was only on the final day when buyers became more selective and some of the lesser types saw a slowing in their momentum. Merino Skirtings followed fleece types higher, rallying 50 to 100 cents with the superfine types most affected. Although the rises were more sedate than the fleece sector, the oddment market performed very strongly this week and Merino Carding indicators in all three centres rose on every selling day. The lift of 30 to 40 cents pushed all 3 carding indicators to record levels, with the NR MC indicator closing at 1164.

In line with pre-Christmas trends the crossbred market was again fairly lacklustre compared to the merino catalogue. The finer microns were reasonably steady but 30-microns and coarser fell as much as 30 cents while poorly prepared &/or faulty types were again neglected, remaining in "no-mans-land".

Wooltrade was also active this week as was the forward market. 271,000 kg traded forward for the week on the Riemann platform, with contracts being placed as far out as March 2018.

Next week's offering is currently forecast at 55,394 bales.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1404 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1266 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
