## MARKET COMMENTARY

### Where is the market headed?

The decline in the men's formal suit business still continues to be a problem with some of the big Japanese men's suit retailers reducing their volume of orders. As a result the big Chinese weavers are trying to off-set the decline by offering more smart casual ranges in their collections. They are also looking to explore other markets (Russia), and other sectors such as corporate wear i.e. airlines, railways, banking etc.

The knitting sector is holding up better, however they see headwinds in the European retail market. In addition to the weak economic conditions in many European countries, the value of the Euro against the US (which has fallen 20% in the past 12 months) is making Chinese imports all the more expensive. As a result of these adverse conditions we may see some "fibre switching" take place in order to meet price points for knitted garments.

The current Chinese government has been attempting to rein in corruption and shadow banking over the past two years, this has resulted in a tightening up of available finance, a situation that continues with exporters still reporting that payment from China is slow. Adding to these existing financial constraints, tough new environmental legislation was also introduced in China this time last year and as a result some of the bigger processors are already up-grading their effluent treatment plants, which is undoubtedly tying up valuable finances that could otherwise be used to purchase wool.

Despite the above and despite the normal seasonal price pattern (where the market often eases through the Autumn/Winter period), exporters are cautiously confident that merino fleece will remain firm with no mention amongst the trade of a downturn in the near future. On the contrary, merino fleece is expected to rise from a low sometime pre-Easter with FNF types expected to be the biggest winners (due to the reduced volumes of these types on offer). However this does not necessarily mean there is an improved long term outlook, but rather a tighter short term 'supply and demand situation' due to the fact that Chinese mills are not heavily stocked (for greasy product or processed tops), while at the same time there is less wool coming onto the market, especially good spec. FNF merino fleece.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years:

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1294 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1181 for 60% of the time, over the past ten years.

**Table 4: Riemann Forwards, latest trades as at: Last Date**

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for

**18 Mic - Monthly Price Movement (c/kg US) - Five year Breakdown**

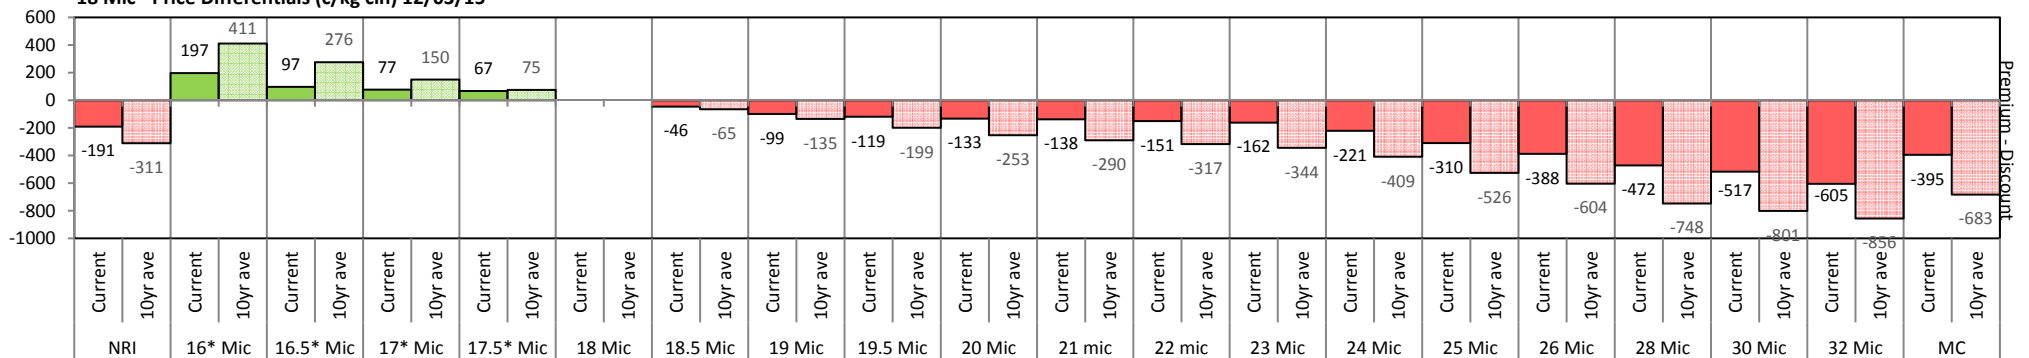

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

**18 Mic - Price Differentials (c/kg cln) 12/03/15**

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
