Note:

* Due to the irregular market quoting for some fine wool categories, figures shown relating to micron categories below 18 micron are an estimate based on the AWEX Premium & Discounts Report & other available information.

* For any category, where there is insufficient quantity offered to enable AWEX to quote, a quote will be provided based on the best available information.

* 10 Year data is not available for some micron categories, which may result in blank spaces in the table above.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown in the table above, detail the period of time during the past 3 & 10 years that the market has traded either at or below its current price.

The higher the percentile, the stronger the market.

MARKET COMMENTARY

One Australian Dollar = 1.014100 US as of: 12/07/2012

NORTHERN REGION –Sale Week 02/12 (49,069 bales offered nationally)

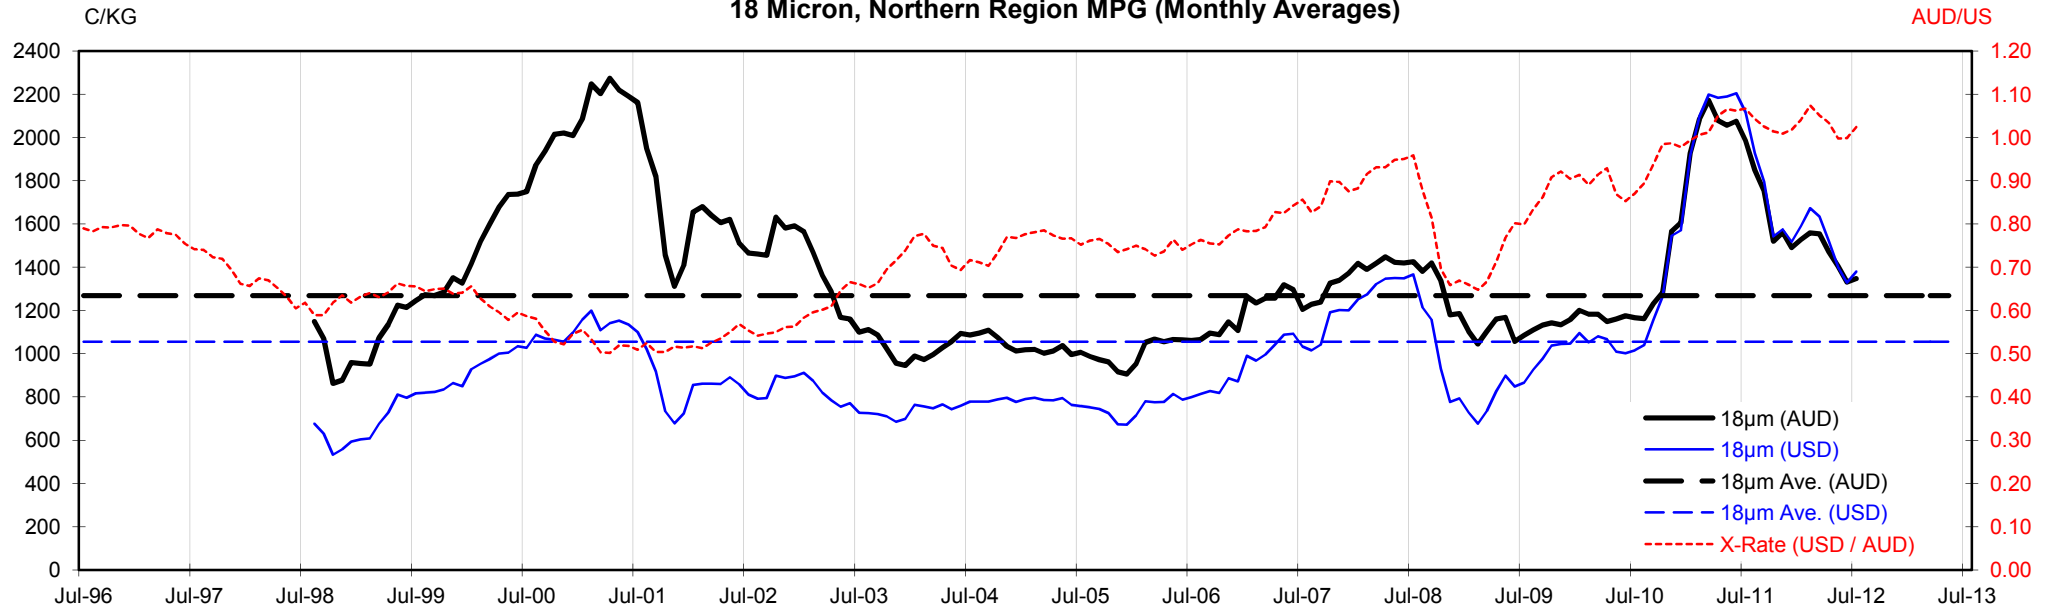

Wednesdays sale saw prices fall for most merino fleece lines. Most types were generally 20 cents lower with the 19.5 to 20 micron range most affected with a 30 cent drop (while 2% VM types were up to 40 cents lower). Movements at the broader end of the market were less exaggerated, leaving a number of 20 to 20.5 micron lines selling at levels below that of comparable 22 micron lines. On a positive note, the fine end of the market (16/17 um) held steady with an odd lot firming slightly. Better style merino skirtings remained unchanged (especially at the finer end), while the odd lower style lot tended 10 cents cheaper. In the oddments, locks & crutchings remained firm to unchanged as were crossbreds. 7.4%

Thursdays market continued to ease, on the back of a large offering leading into the three week recess. Most losses were in the 19 to 20.5 micron range (which fell 20 cents). Low vm types were least affected, however they were outnumbered by 2% VM types and lower spec/style types (tender/cott/colour). A large number of these lots attracted bids in the 1150-1200 cent bracket, regardless of micron. The finer microns were again the highlight of the day with the 16.5/17 micron range remaining firm. Skirtings were generally unchanged for the low-medium Vm types (<5%), while the higher Vm types (>8%) were 10-15 cents cheaper. Locks were firm tending in sellers favour while crutchings & stains remained unchanged. Crossbreds also remained unchanged.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
