## MARKET COMMENTARY

The wool market continued to lose ground this week, with the Northern Region Indicator falling 17 cents to close at 1071.

Once again the skirting, oddment and crossbred markets were reasonably firm and unchanged, while the merino fleece market suffered further falls of 20-30 cents, with the lower spec lots most affected.

Seller resistance to the falling fleece prices remains high, with almost 24% of the merino fleece offering being passed-in over the course of the two days, while a further 1,592 bales were withdrawn prior to sale.

42,853 bales are currently rostered for next weeks sale, followed by similar volumes for the following two weeks.

**Decile Tables are a useful tool for working out price targets.**

**Percentiles are a more accurate guide to where the market is currently trading (The higher the percentile, the stronger the market).**

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 year

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1293 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1134 for 60% of the time, over the past ten years.

Page 7/25

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.
