MARKET COMMENTARY

Due to Easter, this week's sales were held on Tuesday and Wednesday, with the Northern Region sale being held at the Sydney Royal Easter Show.

Following the positive tone set last Thursday, this weeks market started climbing from the outset, with renewed buyer confidence pushing prices higher. The gains were experienced across the entire merino micron range, generally between 70 and 120 cents with 19.0 to 22.0 micron most affected. The NRI regained 59 cents to close at 1608 c/kg.

Although best style / spec merino fleece continued to attract premiums, the lesser style lots enjoyed similar rises as buyers fought for market share. The skirting market closely mirrored the fleece, with best style / spec wools and low vm lots being the most highly sought after and experiencing the largest gains but once again the lesser style / higher vm lots also made large gains, generally between 50 and 80 cents for the week.

Buyer support also continued to remain high in the crossbred market which was reflected by general rises of between 10 and 30 cents. The oddment market was the only sector of the market to record losses for the week with the carding indicators across the three centres dropping by an average of 9 cents.

Due to Easter next week all three selling centres are in recess, sales will resume week commencing 24th of April with selling in Sydney, Melbourne and Fremantle.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1440 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1284 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
