AU BALES OFFERED		49,771		* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																			
AU BALES SOLD		43,808		* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

**MARKET COMMENTARY** Source: AWEX

The market performed steadily this week, with minimal price movements recorded in most sectors. The national offering increased by 4.7%, with 49,771 bales put before the trade. Despite the larger offering and higher FX rate, similar prices were achieved to those of the previous series; and the passed-In rate reduced by 3.3% (with 12% of the offering unable to meet seller expectation).

By the close of trade 17-18 microns had given back 10-27 cents, while the medium to broader microns were 3-10 cents cheaper. The crossbreds did not perform as well as the merinos, recording the largest falls (in percentage terms) for the second week in a row. The broader microns were most affected, this was reflected in the MPGs for 28 to 32 microns', which dropped between 22 and 40 cents.

Next week's offering is currently forecast at 45,929 bales nationally, with only two selling days required.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 2002 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1534 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
