^{* 16.5} is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. * Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorperating the existing 15 & 15.5 micron data, will be provided as a guide.

(week ending 14/06/2024)

MARKET COMMENTARY Source: AWEX

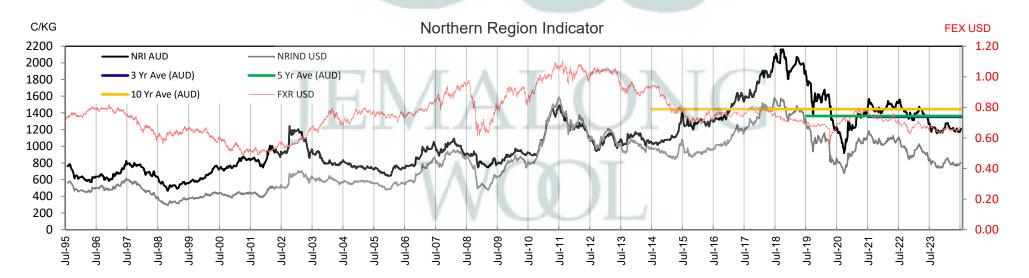

The EMI gained 18 cents this week to finish at 1170 (its largest weekly rise in six months). Auctions were rostered in a Wednesday/Thursday format to allow for the East Coast public holiday on Monday.

Sentiment was notably positive from the outset with good support pushing the EMI 12 cents higher on Wednesday. Thursday was more sedate; however, there was enough pressure for another 6-cent gain in the EMI, making it the longest rally in two years, after six consecutive gains.

Total volumes for the week were just below 32,000 bales which was similar to the previous week and in line with forecasts for the next few weeks.

Sound, high yielding, low VM, best stile wools were all keenly sought after this week, whilst Average and Inferior styles attracted larger discounts. Merino Skirtings also found good support with the better types being the main beneficiary. Crossbreds were generally 10 cents dearer as were Merino Carding types.

With no sale rostered in Fremantle next week the national total is forecast to dip to 28,226 bales.

Definitions:

- * A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.
- Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.
- * Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.
- The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1468 for 60% of the time, over the past ten years.

JEMALONG WOOL BULLETIN

(week ending 14/06/2024)

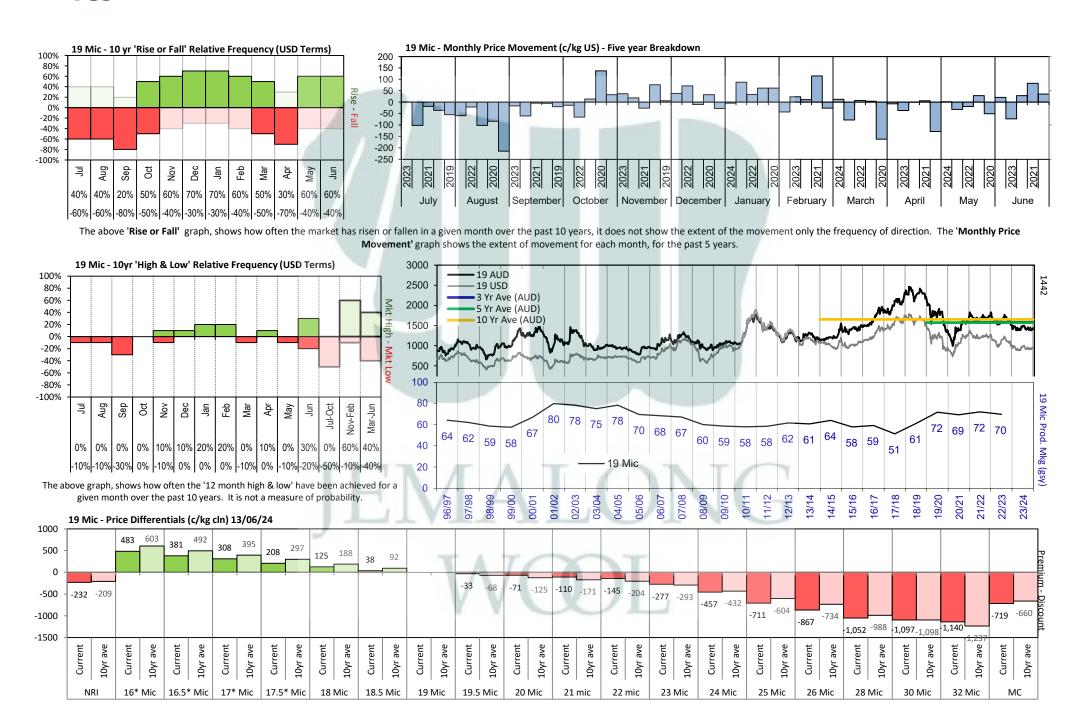

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.
